Understanding KVK, the technical base of artlibraries.net

Uwe Dierolf
Library of the Karlsruhe Institute of Technology (KIT)
KIT Library - pictures

Opened in April 2006
24h library
never closed since 2006
+30,000 visitors per week
KIT Library – more pictures
KIT Library – first 24/7 library in europe

- Self service stations for all tasks using RFID technology
  - Book lending and book return
KIT Library – first 24/7 library in europe

- Self service stations for all tasks using RFID technology
  - Book lending and book return
  - Lending of ILL books
KIT Library – first 24/7 library in europe

- Self service stations for all tasks using RFID technology
  - Book lending and book return
  - Lending of ILL books
  - Lending of keys (keylender)
KIT vs. University of Karlsruhe

- University of Karlsruhe
  - 18,000 students
  - 4,000 researchers and administrative staff

- Forschungszentrum Karlsruhe
  - 4,000 researchers

- KIT = University + Forschungszentrum

- Distance 10 km
KVK – the technical base of artlibraries.net

- Started in August 1996
- Even as old as the internet
- 1,500,000 search requests per month
- Idea
  - In 1996 only few library catalogs had a Z39.50 interface
  - Problem: How to develop a simple user-friendly search service?
  - Solution: Pattern matching
    - Send search requests to a catalog using HTTP requests
      - KVK emulates the user with his browser
    - Take a look on (read / parse) the HTML of the result page
      - Get short title, URL to full title, number of hits, "more hits"-link
    - Create a unique formatted hit list
      with links leading to the destination catalog
Pros and cons of cross search vs. general index

- Cross search could be slow
  - Users have to wait for slow catalogs if they want to see all results
  - But the felt speed is fast cause results of fast catalogs are presented immediately

- Duplicate titles can't be eliminated
  - It's not a problem for the users
  - They are primarily interested in the result

- General index needs the metadata
  - Cross update problem

- KVK can integrate even any web based catalog
  - Cookie problem

- Cross search limits the number of catalogs in a virtual cat.
Cookie problem

- KVK acts like a "man in the middle"
  - KVK starts the search session
  - Some catalogs manage all their session information using cookies
  - To get the full title you need session ID stored in the cookie
  - KVK is not allowed to store cookies for other domains cause of security reasons
- Workaround
  - Relay-mode of the KVK
  - Even requests to get a full title are handled by the KVK server
    - KVK acts like a proxy server for full title requests
    - All links on the full title page which need the session are not working
- Conclusion: in most cases cookies are a "no go"
Workflow of a KVK request

User

KVK-Search

result only

get full title

invalid session or session timed out

KVK

native search

result + cookie

Catalog using cookies
Solutions to circumvent the cookie problem

- KVK uses internal search interface for search engines
  - In most cases the result is machine readable, e.g. XML

- Examples
  - Infoguide from OCLC
    - KVK sends search requests to the Infoguide Web service
  - DNB catalog
    - KVK sends SRU requests to the DNB server
  - Union catalogs KOBV and BVB
    - KVK uses the internal search interface to Lucene / Fast

- Why does this help?
  - KVK doesn't need the session ID and the cookie any more
  - KVK creates "deep links" as links to the full title
    - Use the ID of the title in the URL
Delivery service based on KVK

- Lit-Express
- Simple form of ILL
- KVK extracts the title data and fills an order form
New features in KVK search

- My catalogs
  - Saving and restoring selections of catalogs
  - Based on Javascript Library jQuery

- "Did you mean ..."
  - Using Google to prevent typing mistakes
  - ... under construction
Thanks for your attention
