

Standardisation and material databases: a successful example

Steffen Grohmann, KIT, Convenor of CEN/TC 268/WG6

Mohammed Fouaidy, IPN Orsay

2nd AMICI – Industry Forum, Brussels (B), 17-18 September 2019

PART I: Steffen Grohmann (KIT)

STANDARDISATION (AMICI WP5.3)

■ The challenge

- **Safety aspect** of cryogenic equipment is a recurrent matter
- **Differences** of design practices, understanding of risk and technical solutions
- **Many difficulties** inside international collaborations and between labs and industry
- Potentially **serious consequences** on project schedules and expenses

■ The AMICI proposal

- **Organise** and **coordinate** a CEN working group
- Compose a **draft European safety Standard** for cryogenic equipment
- **Assess dynamic codes** for incident modelling
- Define **scope of future development** for standardisation of a dynamic model

Motivation

■ Helium dewars vs. helium cryostats

New working group

CEN/TC 268 - Cryogenic vessels

[General](#)
[Structure](#)
[Work programme](#)
[Published Standards](#)

CEN/TC 268 Scope

Standardization in the field of insulated vessels (vacuum or non- vacuum) for the storage and the transport of refrigerated liquefied gases ,as defined in Class 2 of "Recommendations on the Transport of dangerous goods - Model regulation" , in particular concerning the design of the vessels and their safety accessories, gas/materials compatibility, insulation performance, the operational requirements of the equipment and accessories. The one-off preparation of standards for hydrogen technologies strictly meeting the European mandate on the draft Directive deployment of alternative fuels infrastructure.

Officers

Chairperson Dr Hervé Barthélémy

Secretary Ms Laurie Jardel

CEN/TC 268 Subcommittees and Working Groups

Working group	Title
CEN/TC 268/WG 1	Design
CEN/TC 268/WG 2	Compatibility, insulation, accessories
CEN/TC 268/WG 3	Operational requirements
CEN/TC 268/WG 5	Specific hydrogen technologies applications
CEN/TC 268/WG 6	Specific helium technology applications

Aim of CEN/TC 268/WG6:

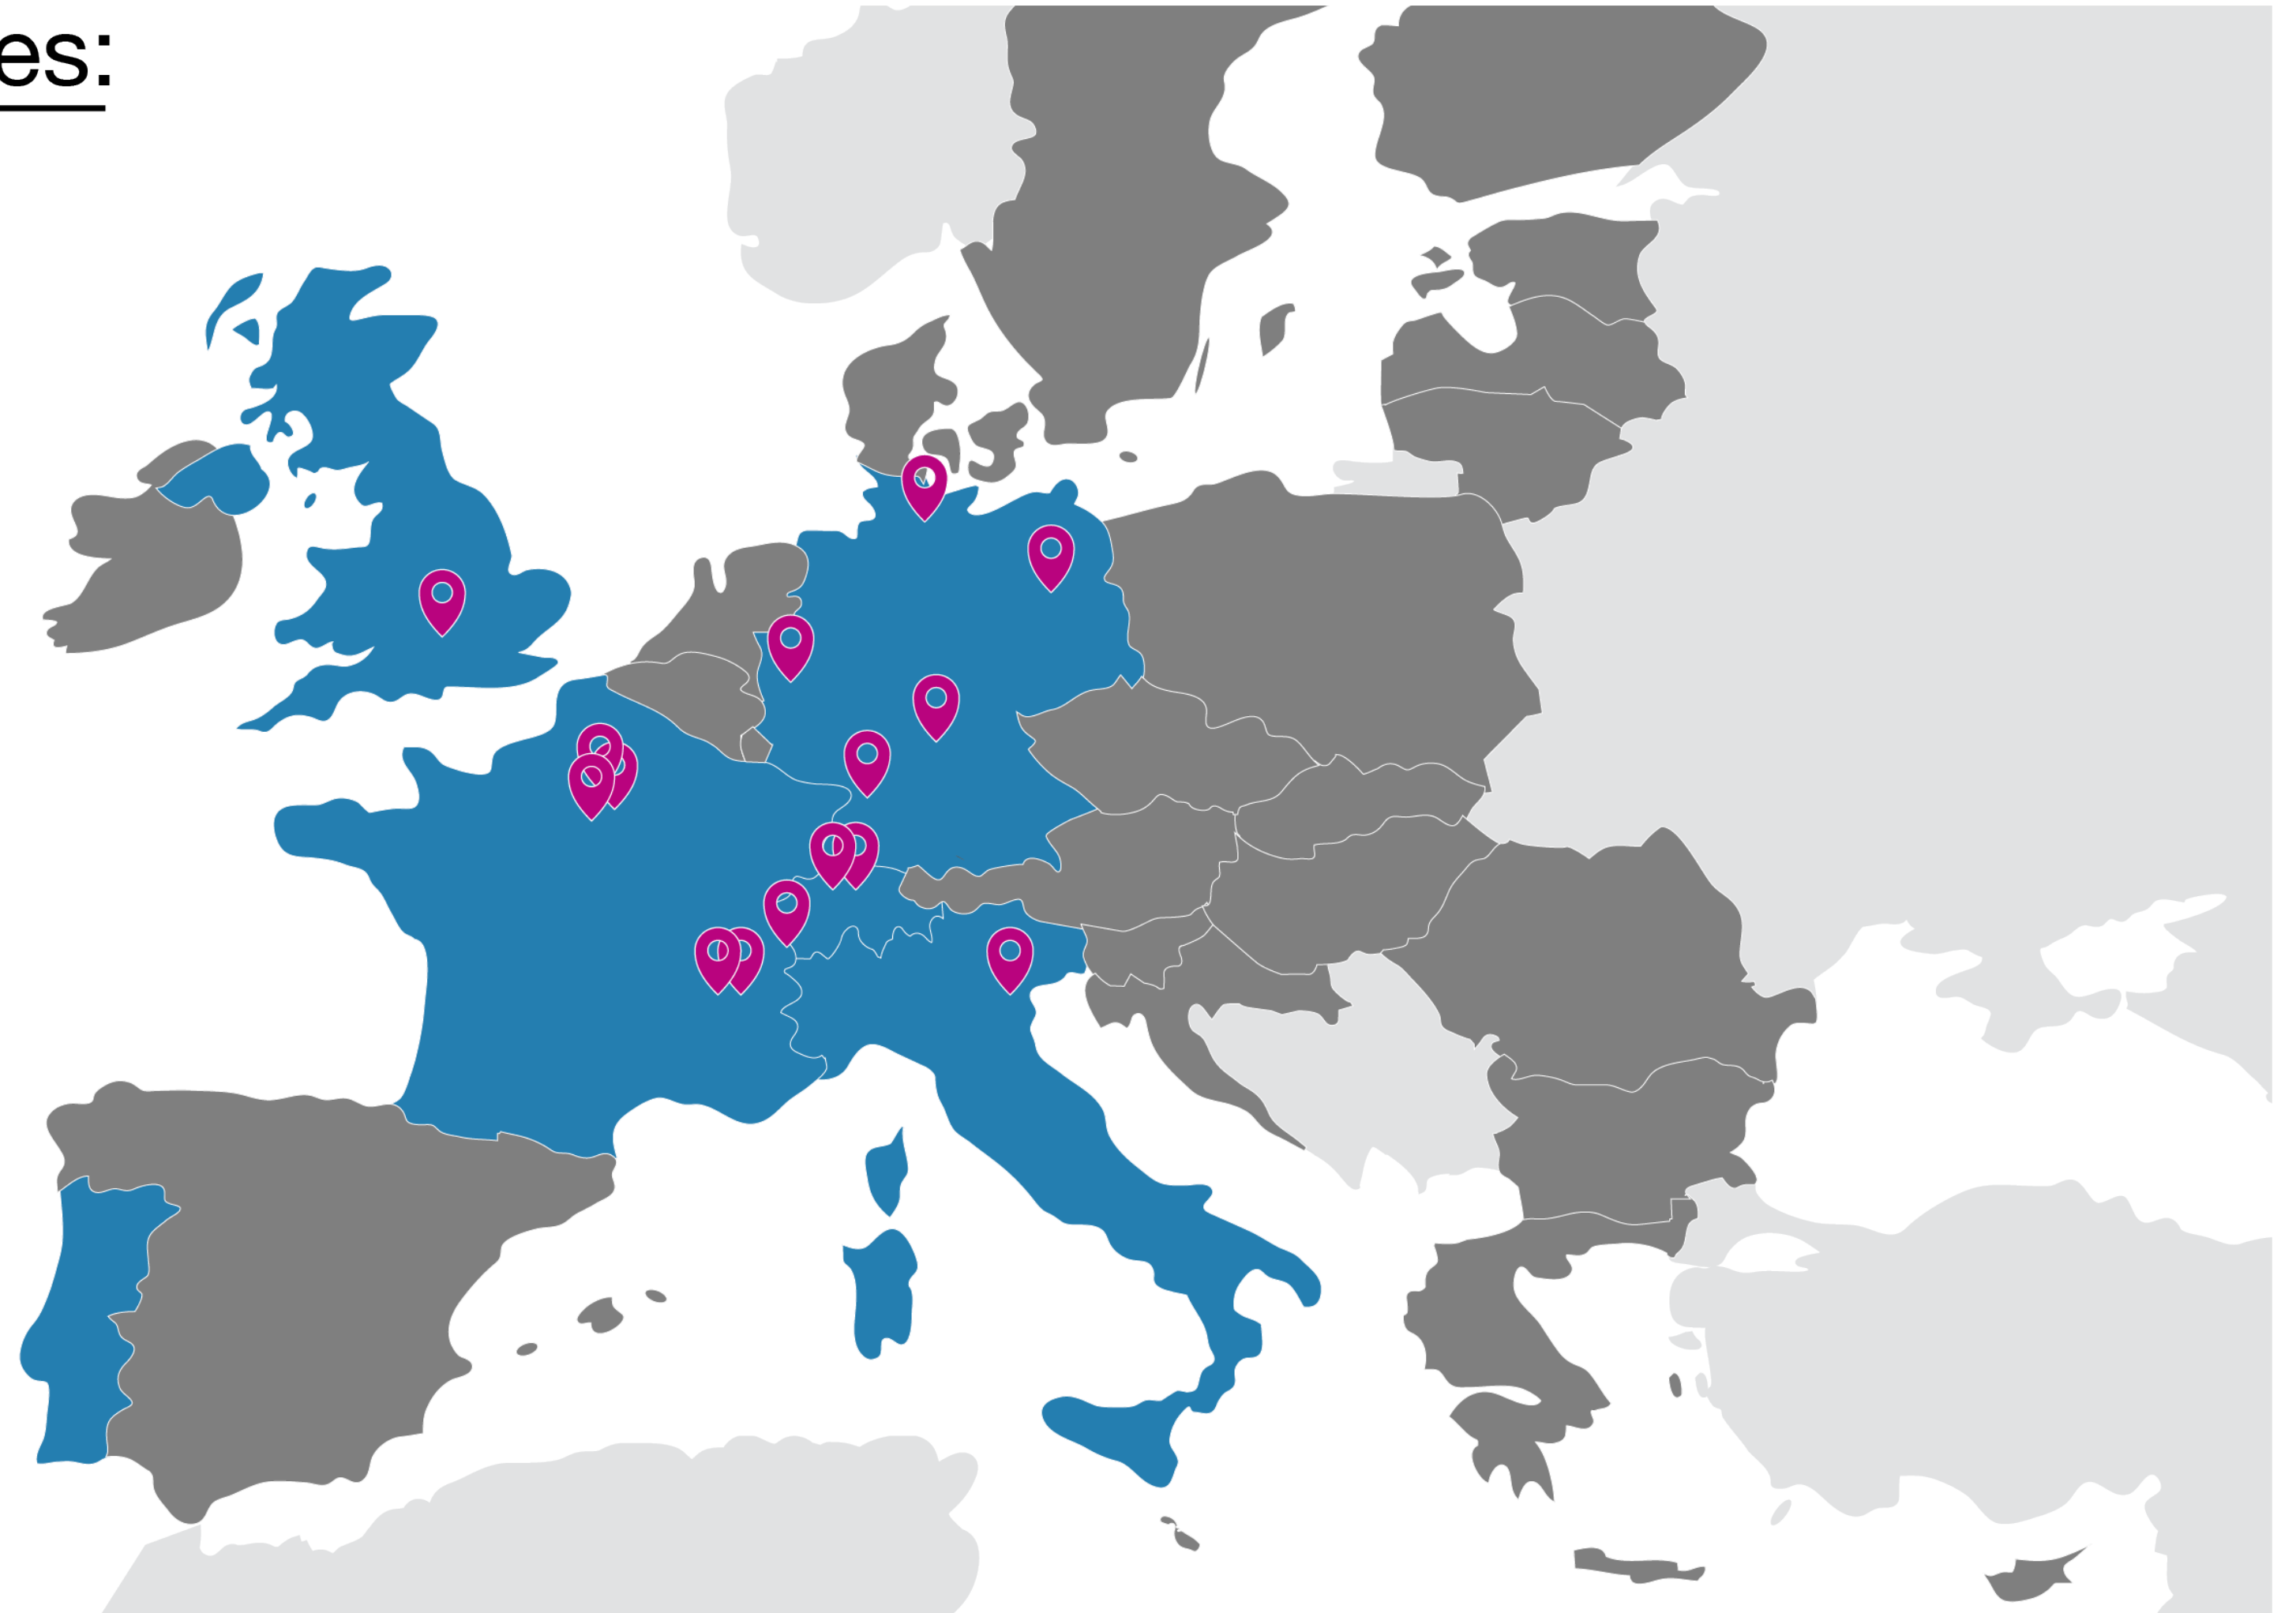

New European Standard on „*Helium Cryostats – Protection against excessive pressure*“

Organisations contributing to CEN/TC 268/WG6

National Standardisation Bodies:

Organizations:

Structure and contents

CEN/TC 268
 Date: 2017-11
 prEN-00268071
 Secretariat: AFNOR

Helium cryostats — Protection against excessive pressure

Helium-Kryostate — Schutz gegen Drucküberschreitung

Cryostats pour hélium — Protection contre les surpressions

ICS:

Descriptors:

Document type:
 Document subtype:
 Document stage: Working Document
 Document language: E

STD Version 2.8l

STD Version 2.8l

- 11 site meetings** + web conferences of CEN/TC 268/WG6
- Publication of the **draft European Standard** planned for end 2019
- Harmonisation** with the Pressure Equipment Directive (PED) in a subsequent step via CEN **HAS Consultants** after publication

Actual status

- PICARD test stand at KIT
- 2 PhD thesis
- KIT-CERN cooperation
- 6 publications

Future development

- Planned 3rd PhD project on ***dynamic helium cryostat safety model*** within KIT-CERN cooperation
- 20-30 additional tests*** with different types of multi-layer insulation
- Probabilistic modelling approach
- Explore possibilities of ***normative dynamic algorithm*** and ***normative solution strategy***

PART II: Mohammed Fouaidy (IPN)

MATERIAL DATABASES (AMICI WP5.2)

Main goal of WP5.2

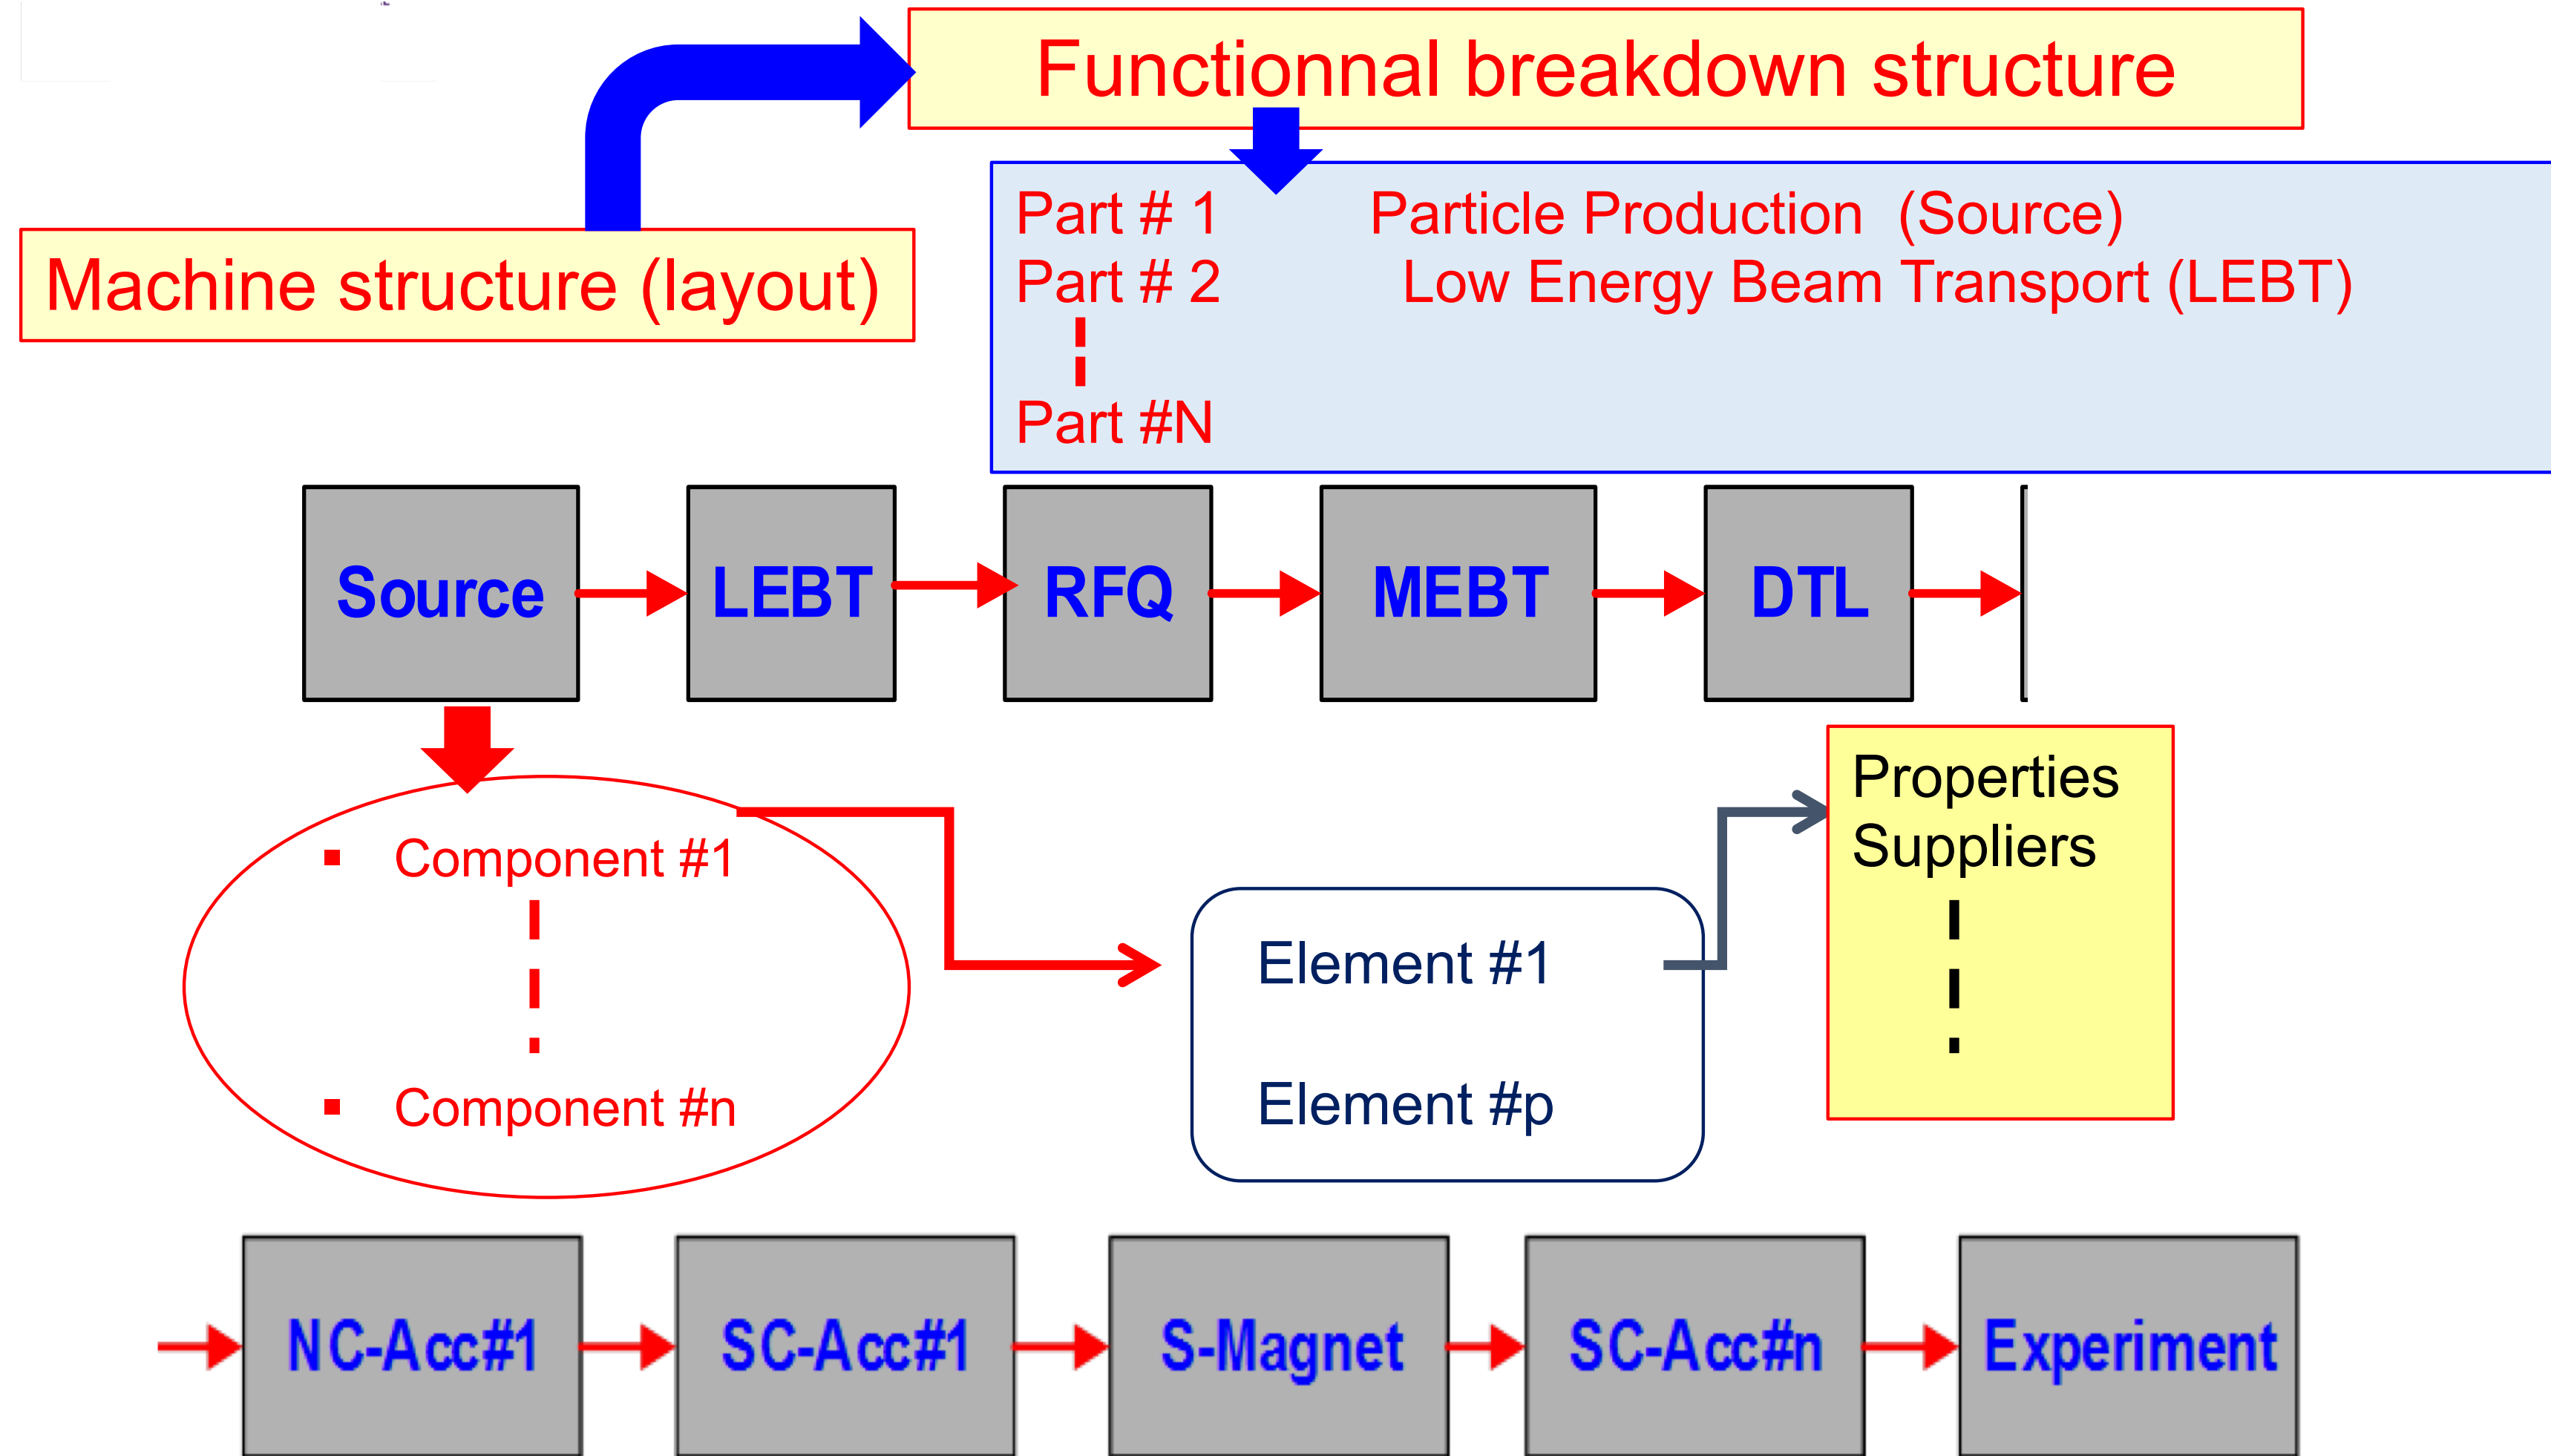

Main objective:

- Create a common reference database dedicated to
 - ▶ Materials and components for accelerators
 - ▶ Large SC magnets
- Start to fill it with relevant data

Three steps approach:

1. Collect an initial set of basic data relevant to material and components specifications
 2. Provide a possible structure for the database
 3. Develop and implement a professional database
- ▶ Only steps 1) and 2) in the framework of AMICI
 - ▶ Step 3) to be resourced in a next phase

Philosophy of the DB structure

Example: SRF cryomodule

Database input

Key word : SRF cryomodule

Material

Properties

Components

- SRF cavity
- Lhe Tank
- Cold Tuner
- Power Coupler
- Magnetic shields
- Thermal Shields
- Vacuum vessel

Cavity : Nb
Flanges : SS, NbTi

Tank : SS, Ti

Thermal Shield: Cu, Al

Vacuum vessel: SS

Material, Grade, Purity treatment, metallurgy
Mechanical (Young and shear modulus, YS,UTS,)
Thermal (Conductivity, diffusivity,
Electrical (Resistivity
Superconducting (TC, HC,JC..)
Magnetic properties (permeability,
Radiation (neutrons, Xrays,..)

Database output

Components

- SRF Cavity
- Lhe Tank
- Magnetic Shields
- Thermal Shields

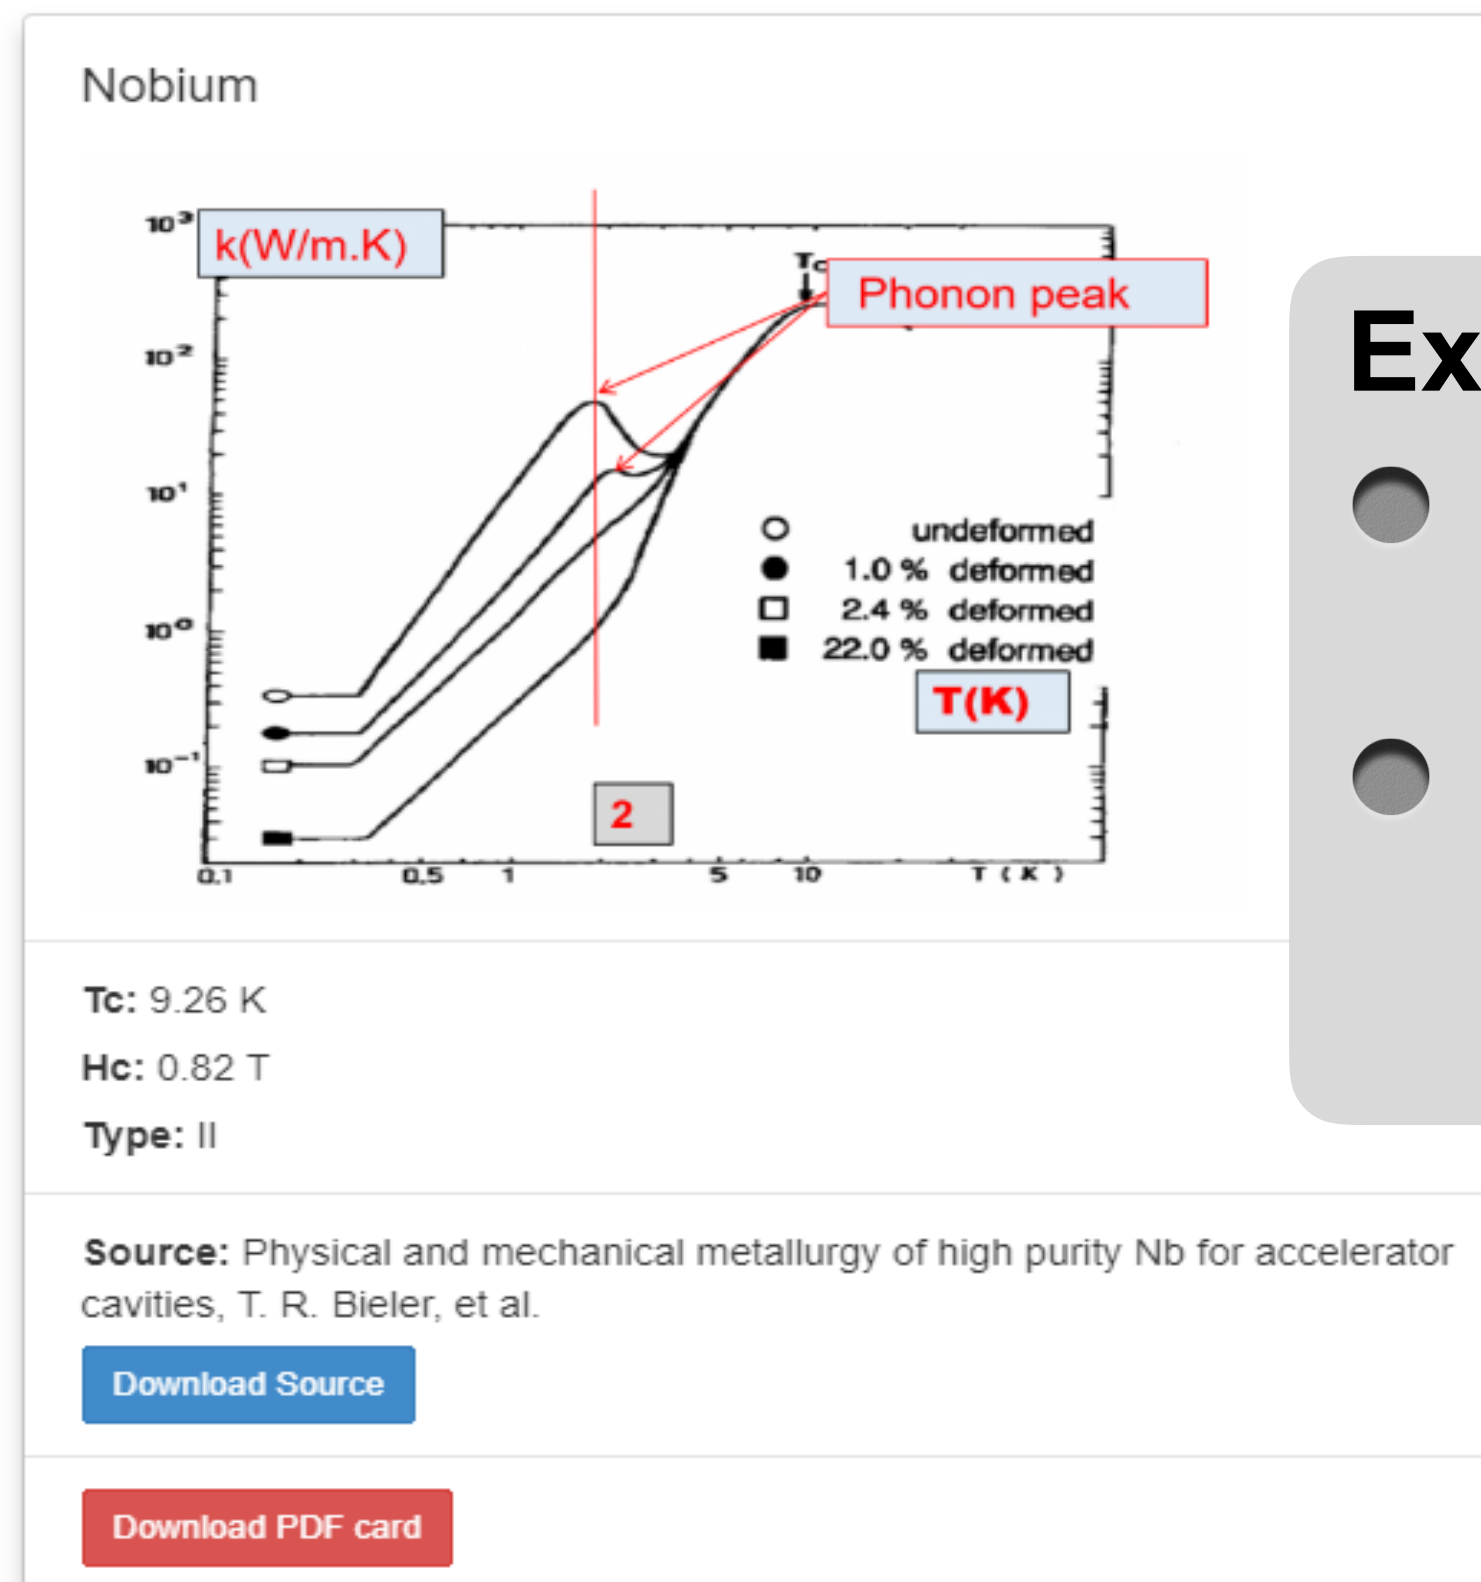

Material

- Nb
- NbTi

Properties

- Conductivity
- Resistivity
- Thermal data
- Thermal conductivity
- Young modulus

Thermal data

Example:

- SRF Niobium (Nb) Accelerating Cavity
- Effect of plastic deformation on the thermal conductivity of Nb

- Philosophy of AMICI DB structure (based on functional breakdown)
- Definition of what should be included in the AMICI-DB
- Survey of existing databases and data useful for accelerators and magnets
- Bibliography, collection of first set of data for AMICI-DB
- Choice of software for DB development and architecture
- Development of AMICI-DB demonstrator
- Deliverable D5.1 *‘Definition of the possible structure and content of a database for materials and components’* (In final reviewing stage)
- AMICI-DB implementation (To be done in a next EU supported project?)

Standardisation and material databases: a successful example

THANK YOU FOR YOUR ATTENTION!
