In den letzten zwei Jahrzehnten gewannen Netzwerkanalysen und -darstellungen in vielen Wissenschaftsdisziplinen an Bedeutung und sind heute ein nicht mehr wegzudenkender Teil des wissenschaftlichen Instrumentariums. Dabei ist relativ schnell gesagt, was ein Netzwerk eigentlich ist: eine Menge von Knoten, die durch Kanten verbunden sind. Was Netzwerke allerdings im jeweiligen disziplinären Anwendungsfeld bedeuten können, ist weniger leicht gesagt. In diesem Reading Seminar nähern wir uns dem interdisziplinären Paradigma des Netzwerks mit Beispielen aus Linguistik, Psychologie und Soziologie. #### 21.1.2. Topical competence

2500081 English	<b>Probabilistic Time Series Forecasting Challenge</b>  Blended (On-Site/Online) <b>Organizational topics</b> <b>Short description</b> In this data science project, students make and evaluate statistical forecasts in a realistic setup (involving real-time predictions and real-world time series data). A kick-off meeting will take place in mid October. During the semester, there will be a weekly meeting in which students and instructors discuss the current state of the forecasting challenge.  <b>Prerequisites</b> Students should have a good working knowledge of statistics and data science, including proficiency in a programming language like R, Python, or Matlab. Knowledge of time series analysis is helpful but not strictly required. Motivation and curiosity are particularly important in this course format that requires regular, active participation over the whole semester.  Please note that the number of participants is limited due to the interactive course format. Application takes place via the Wiwi portal, where further information is available.  <b>Examination rules</b> The project seminar counts for 4.5 credit points (Leistungspunkte). Examination is via an alternative exam assessment (§4(2), 3 SPO). Necessary conditions to pass the course: 1) Weekly submission of statistical forecasts during the semester (excluding the Christmas break), 2) Submission of a final report (10-15 pages) at the end of the semester, describing the forecasting methods and their statistical evaluation. Grading is based on the final report.	<b>Project (PRO)</b> Krüger, Fabian Bracher, Johannes Koster, Nils Lerch, Sebastian
