

Demonstration of the Infrastructure Use Case 02

Framework for curation and distribution of reference datasets

Contributors:

Thomas Hammerschmidt, Mariano Forti, Luis Ávila, Jürgen Olbricht, Birgit Skrotzki, Anika Lenze, Angelika Gedsun, Tilmann Hickel, Hanna Tsybenko, Mirek Chmielowski, Sirieam Hunke, Yusra Shakeel, Rainer Stotzka

Introduction and Motivation

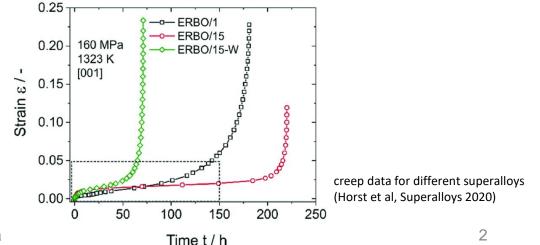

"The aim of IUC2 is to **develop a framework for reference material data sets** using creep properties of single- & polycrystalline Ni-based superalloy as example."

https://nfdi-matwerk.de/infrastructure-use-cases/iuc02-framework-for-curation-and-distribution-of-reference-datasets

- User/User Journey: Research task could be alloy design, optimization of mechanical properties (chemical composition, heat treatment strategy)
- **Data available**: Normal' data set (DS) e.g. from SFB/TRR 103 vs. reference data set (RDS) e.g. from BAM
- A RDS would be a DS used
 - as high quality data to correlate material properties and serve as baseline for the optimization process
 - o to calibrate the experiments in the own lab
- Requirements (contents, shape, FAIR, accessibility)

Demonstrator at the booth at marketplace: GitLab (Notebook with data) User Journey: <u>https://app.conceptboard.com/board/x7zn-2yq0-eabn-piic-dbiu</u>

Creep Reference Data

"develop a framework for reference material data sets"

Reference Data Set

- Definition, criteria for reference data (material, equipment, procedures, results)
- ... Community process needed → Poster
- Curation process

User/Usage Analytics

- Testing laboratories
- Researchers

Possible uses

- Comparison of data for interpretation of individual measurement results
- Calibration/verification of measurement devices
- ... Community process needed → Poster

→ Different user cases derive different requirement profiles (for **content** and **shape** of data)

Creating the reference dataset

Content:

- MSE perspective or "Fit for purpose"¹
- <u>Agreement</u> on content based on input from domain experts

Shape:

- RDM perspective or "Fit for use"¹
- Creation, structuring and distribution of (creep) (meta)data: <u>FAIR DOs</u>

Distribution/Publishing of the Reference Data Set

• <u>Ontology</u>, Licensing, DOI

¹ Ariza, Angela et al., Datennachnutzung in der Praxis; DOI: 10.5281/zenodo.7568266

Agreement and Data Structuring

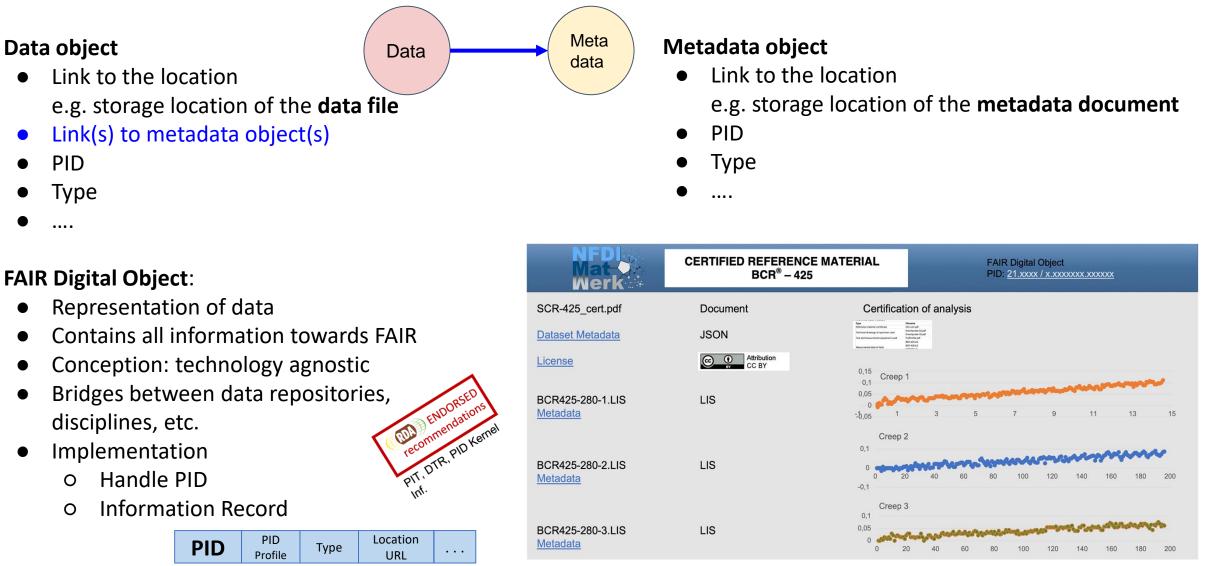

• Agreement on:

- (meta)data and documentation, considering the existing datasets (BAM, RUB, SFB/TR 103)
- data structure and vocabulary (ISO 204-standard on creep testing)
- a "rating" of the (meta)data to define quality requirements in terms of contents
- Vision: Creation (a) data schema template(s) or check lists to be used by the community (to generate RDS)

Shaping Exemplary Data Set: FAIR Digital Object

Exemplary RDM Reference Data Set: Technical Process Overview

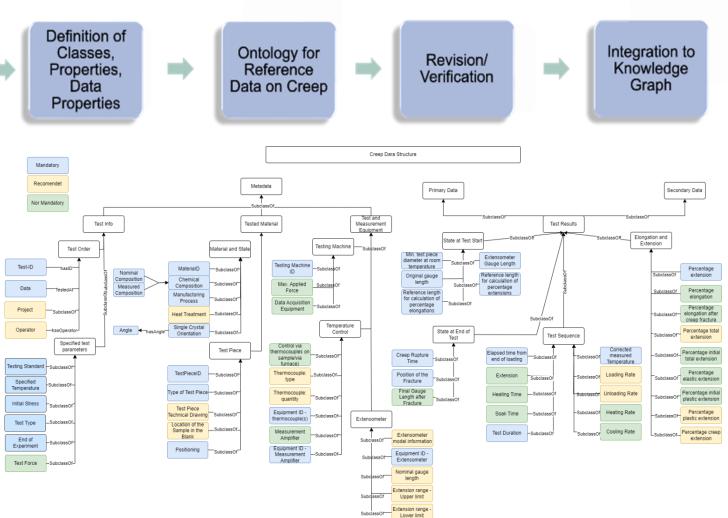

Towards Ontology for Creep Data (Reference Data Set) Ongoing work

Scope and Definition of Requirements

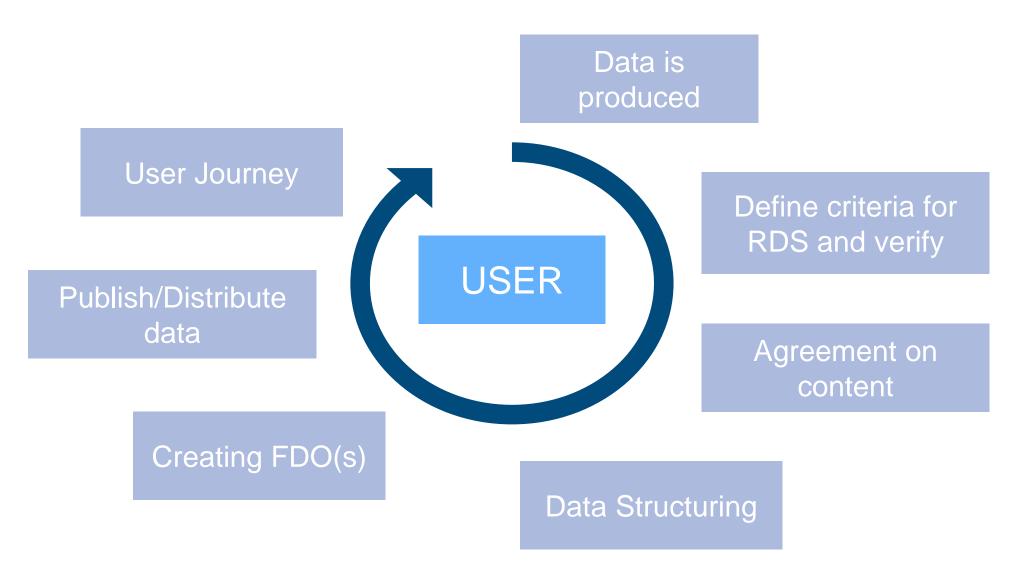

Controlled Vocabulary

- Domain: MSE (High temperature application/ creep testing)
- Requirements:
 - Representation of creep testing in a conceptual way for a reference material and based on a testing standard/norm
 - ightarrow user can transfer the concepts in their own work
- Status: Metadata annotation /agreement on controlled vocabulary (with BAM/RUB)
- Reuse:
 - NFDIcore
 - PMDcore Ontology on tensile testing

Key Takeaway

Back-Up slides

A reference dataset is available. It provides:

- Data schema
- Example data

A group wants to publish data related to previous publication. They follow the next steps:

- get the data schema
- Prepare their data for schema compatibility
- Fill the data schema with their data
- compare the data with reference dataset to check completeness

Application for data schema and control vocabulary

+

Data schema / vocabulary from experts
