

Building the MDMC-NEP Glossary

Rossella Aversa (KIT-SCC)
SIG Metadata and Ontologies, 23.02.2024

Background

Background

- Helmholtz JL-MDMC: Joint Lab “Model and Data driven Materials Characterization”
 - Central, correlative experimental methodology platform
 - Multiscale and multidimensional characterization, analytics and simulation methods
 - 3 Helmholtz Centers (KIT, FZ-Jülich, HZ-Hereon)
 - <https://jl-mdmc-helmholtz.de>

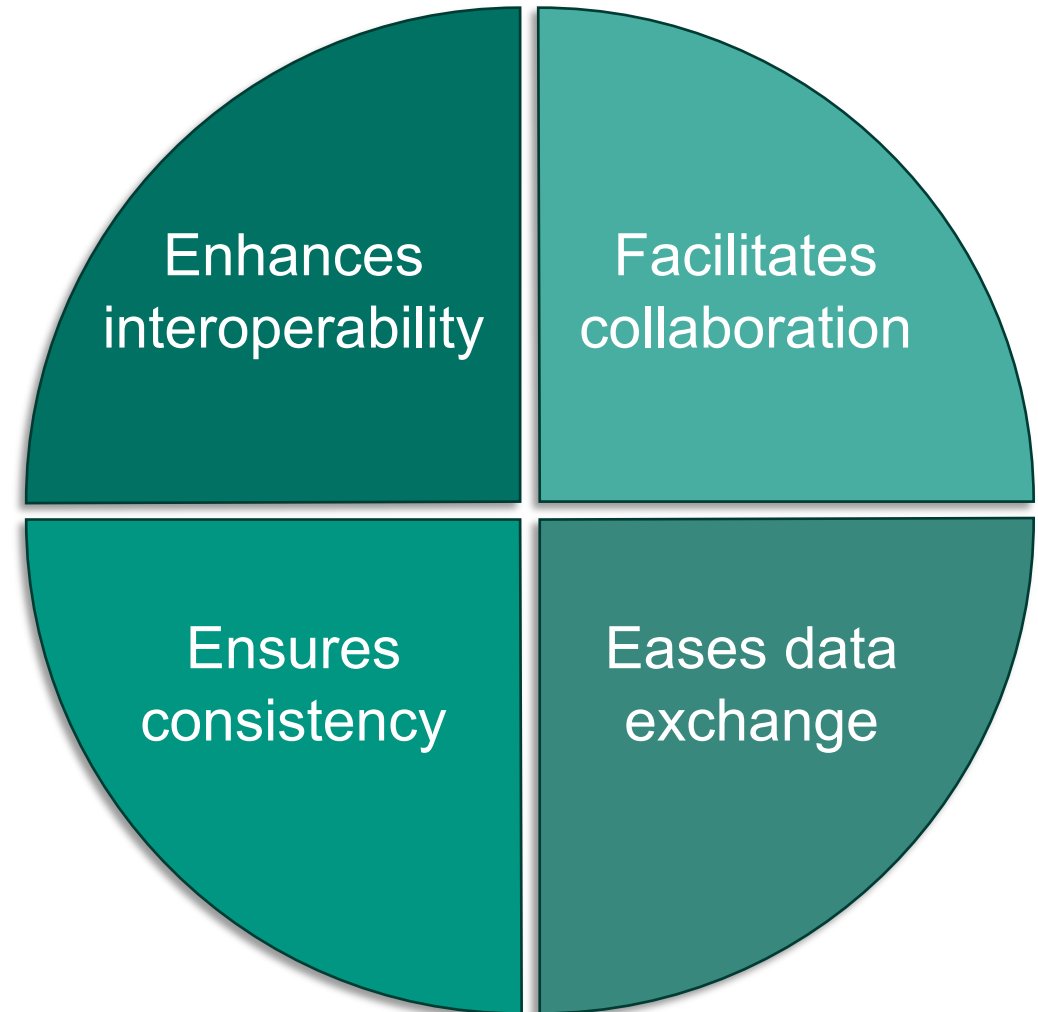

Background

- Metadata Working Group:
 - Implement (meta)data management practices following the FAIR principles
 - Develop tools and infrastructure solutions guided by community requirements
 - Agree on common descriptions
 - Collaborate on interoperable results
 - <https://jl-mdmc-helmholtz.de/mdmc-activities/metadata-working-group/>

Motivation

- Different communities
 - Common aims
 - Similar workflows
 - Need of data reuse/exchange
-
- Importance of a common glossary

MDMC-NEP Glossary

- 45 high-level terms
- Describes computational/experimental workflows
- Reflects the lifecycle of entities and data
- Framed in the management infrastructure of the involved projects
- Tracks basic provenance information
- Living document
- DOI: [10.5281/zenodo.10663833](https://doi.org/10.5281/zenodo.10663833)

MDMC-NEP Glossary: overview

Research User

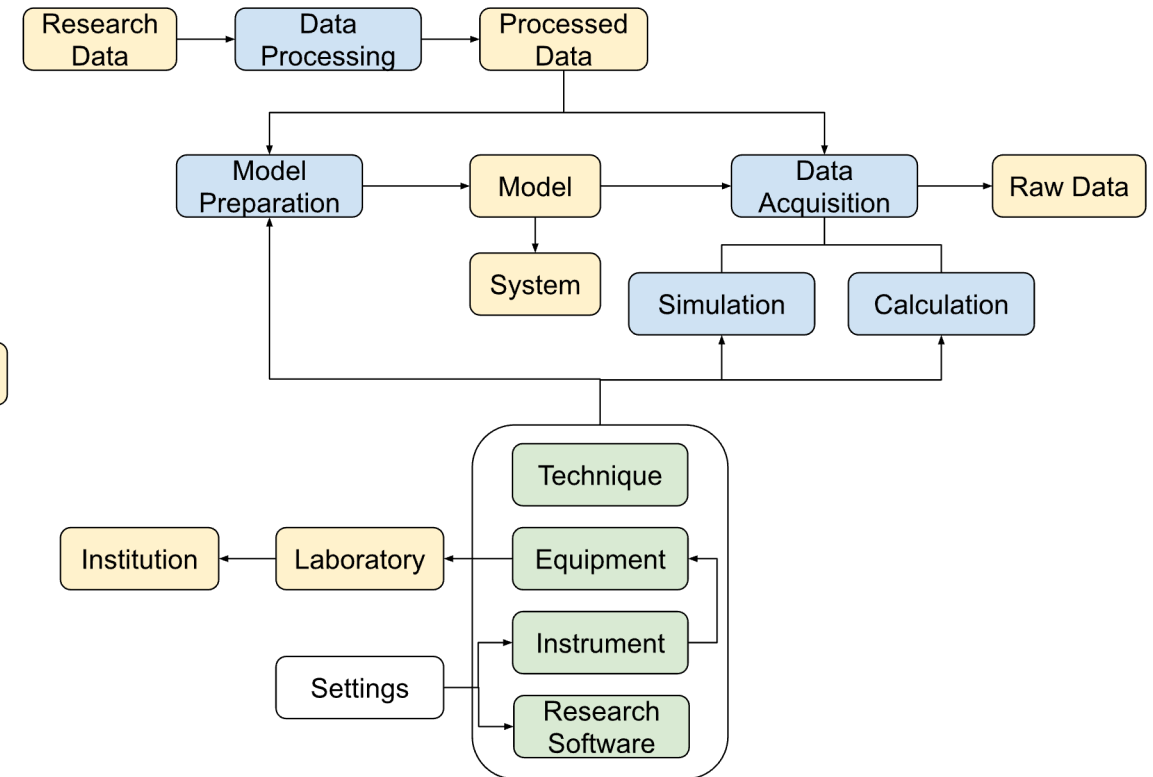

Person, usually member of a **Project**, who conducts any part of the **Study**, in order to collect and/or analyse **Research Data** or is interested in reusing **Research Data** by a third party (e.g., **Reference Data**) with the final aim to extract insights that support the answer to some specific research question (i.e., **Conclusions**). **Research Users** may be assigned with a role (data curator, instrument scientist, team leader, team member).

Glossary development

1. Clarify objectives

- Define scope and purpose: ensure relevance to specific research goals
- Identify target audience: enhance effectiveness and usability within the scientific community

14
techniques

2. Literature review and adoption

- Identify existing terminology: relevant to the research field
- Adoption: ensure alignment with the relevant terms

Materials Design Ontology

Materials Resource Registry

Part of the Materials Genome Initiative

CODATA CASRAI RDM Terminology

PhySH - Physics Subject Headings

3. Collaborative sessions

- Brainstorming and exchange: involve participants
- Consensus building and decision-making: collaborative environment

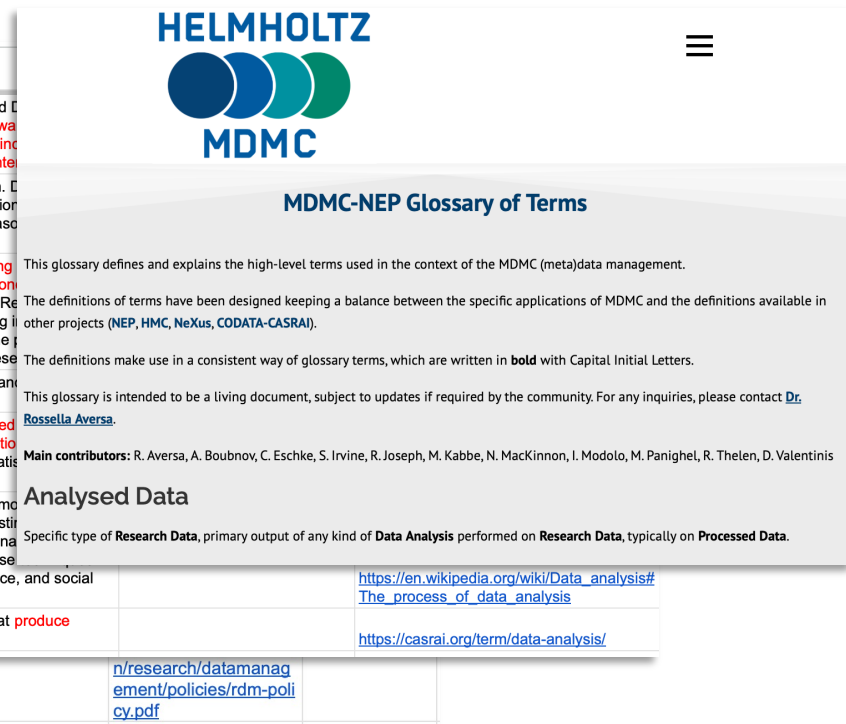

4. Use tools

- Shared tables: collaborative work and comments
- Website: promote access and visibility

	A	B	C
1	Term	Definition close to NFFA-Europe	MDMC-NEP Metadata
26	Research data	Data examined and considered as a basis for reasoning, discussion, or calculation in a research context. Examples of Research data include statistics, results of experiments, measurements, observations resulting from fieldwork, survey results, recordings and images. Within this definition, Raw data and Analysed Data are particular types of Research Data.	<u>Data collected, created, or examined by Research Users be analysed or considered on a basis for reasoning, discussion or calculation in a research context, with the purpose of generating, verifying and validating original scientific claims. Examples of Research data include statistics, results of experiments, measurements, observations resulting from fieldwork, survey results, recordings and images. Within this definition, Raw Data, Processed Data, Analysed Data and Reference Data are particular types of Research Data.</u>

Term	definition
Data Analysis	The identifiable action of processing Raw or Analysed Data. analysis may be performed using Data Analysis Software combined in chains or workflows. The Data Analysis includes processing, (correlative characterization), and data interpretation.
Data Analysis	Data analysis is the most crucial part of any research. It summarizes collected data. It involves the interpretation gathered through the use of analytical and logical reasoning to determine patterns, relationships or trends.
Data Analysis	Data Analysis is the process of systematically applying and/or logical techniques to describe and illustrate, compare, recap, and evaluate data. According to Shamo and Re various analytic procedures "provide a way of drawing inferences from data and distinguishing the signal (the part of interest) from the noise (statistical fluctuations) present in the data."
Data Analysis	Data analysis is the process of collecting, modeling, and analyzing data to extract insights that support decision-making.
Data Analysis	Data Analysis involves actions and methods performed to help describe facts, detect patterns, develop explanatory hypotheses. This includes data quality assurance, statistical analysis, modeling, and interpretation of results.
Data Analysis	A process of inspecting, cleaning, transforming, and modeling data with the goal of highlighting useful information, suggesting conclusions, and supporting decision making. Data analysis has multiple facets and approaches, encompassing diverse theories and applications under a variety of names, in different business, science, and social science domains.
Data Analysis	A data lifecycle stage that involves the techniques that produce synthesized knowledge from organized information.

HELMHOLTZ MDMC

MDMC-NEP Glossary of Terms

This glossary defines and explains the high-level terms used in the context of the MDMC (meta)data management.

The definitions of terms have been designed keeping a balance between the specific applications of MDMC and the definitions available in other projects (NEP, HMC, NeXus, CODATA-CASRAI).

The definitions make use in a consistent way of glossary terms, which are written in **bold** with Capital Initial Letters.

This glossary is intended to be a living document, subject to updates if required by the community. For any inquiries, please contact [Dr. Rossella Aversa](#).

Main contributors: R. Aversa, A. Boubnov, C. Eschke, S. Irvine, R. Joseph, M. Kabbe, N. MacKinnon, I. Modolo, M. Panighel, R. Thelen, D. Valentinis

Analysed Data

Specific type of **Research Data**, primary output of any kind of **Data Analysis** performed on **Research Data**, typically on **Processed Data**.

Overcoming implementation challenges

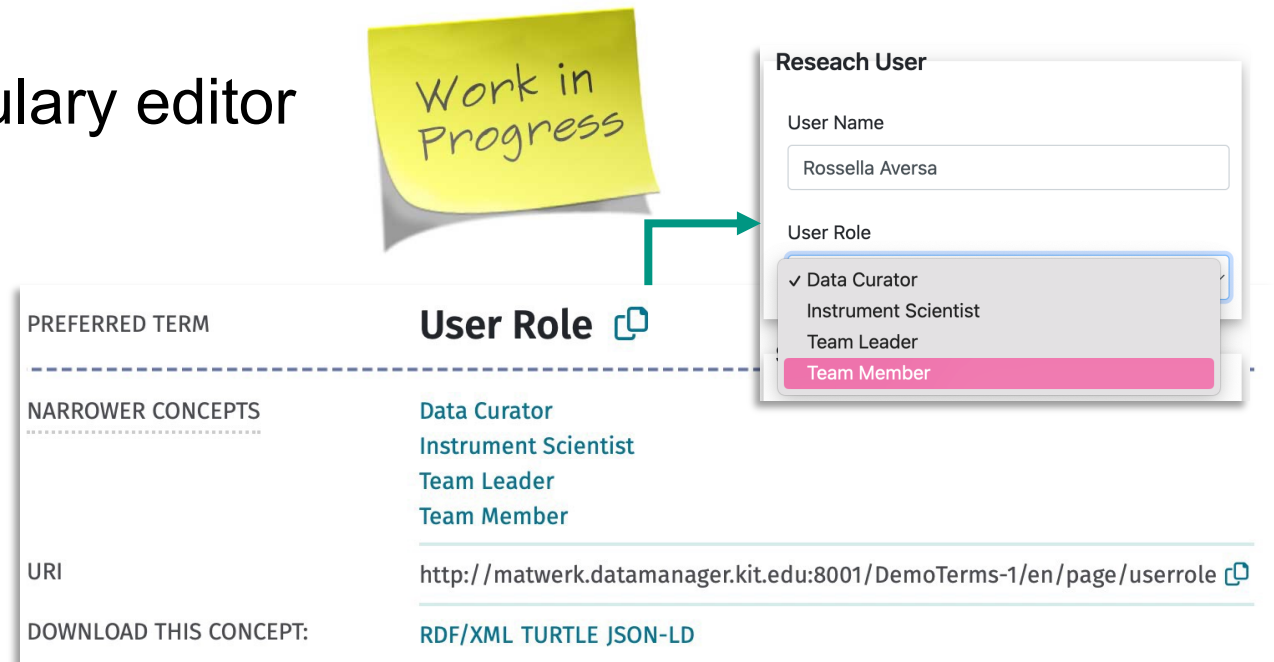

Maintenance and updates

- Regular reviews and revisions: up-to date and aligned to the scope
- Incorporate new terms: dynamic resource
- Enhance accessibility and interoperability: vocabulary service

EVOKS: Collaborative online vocabulary editor

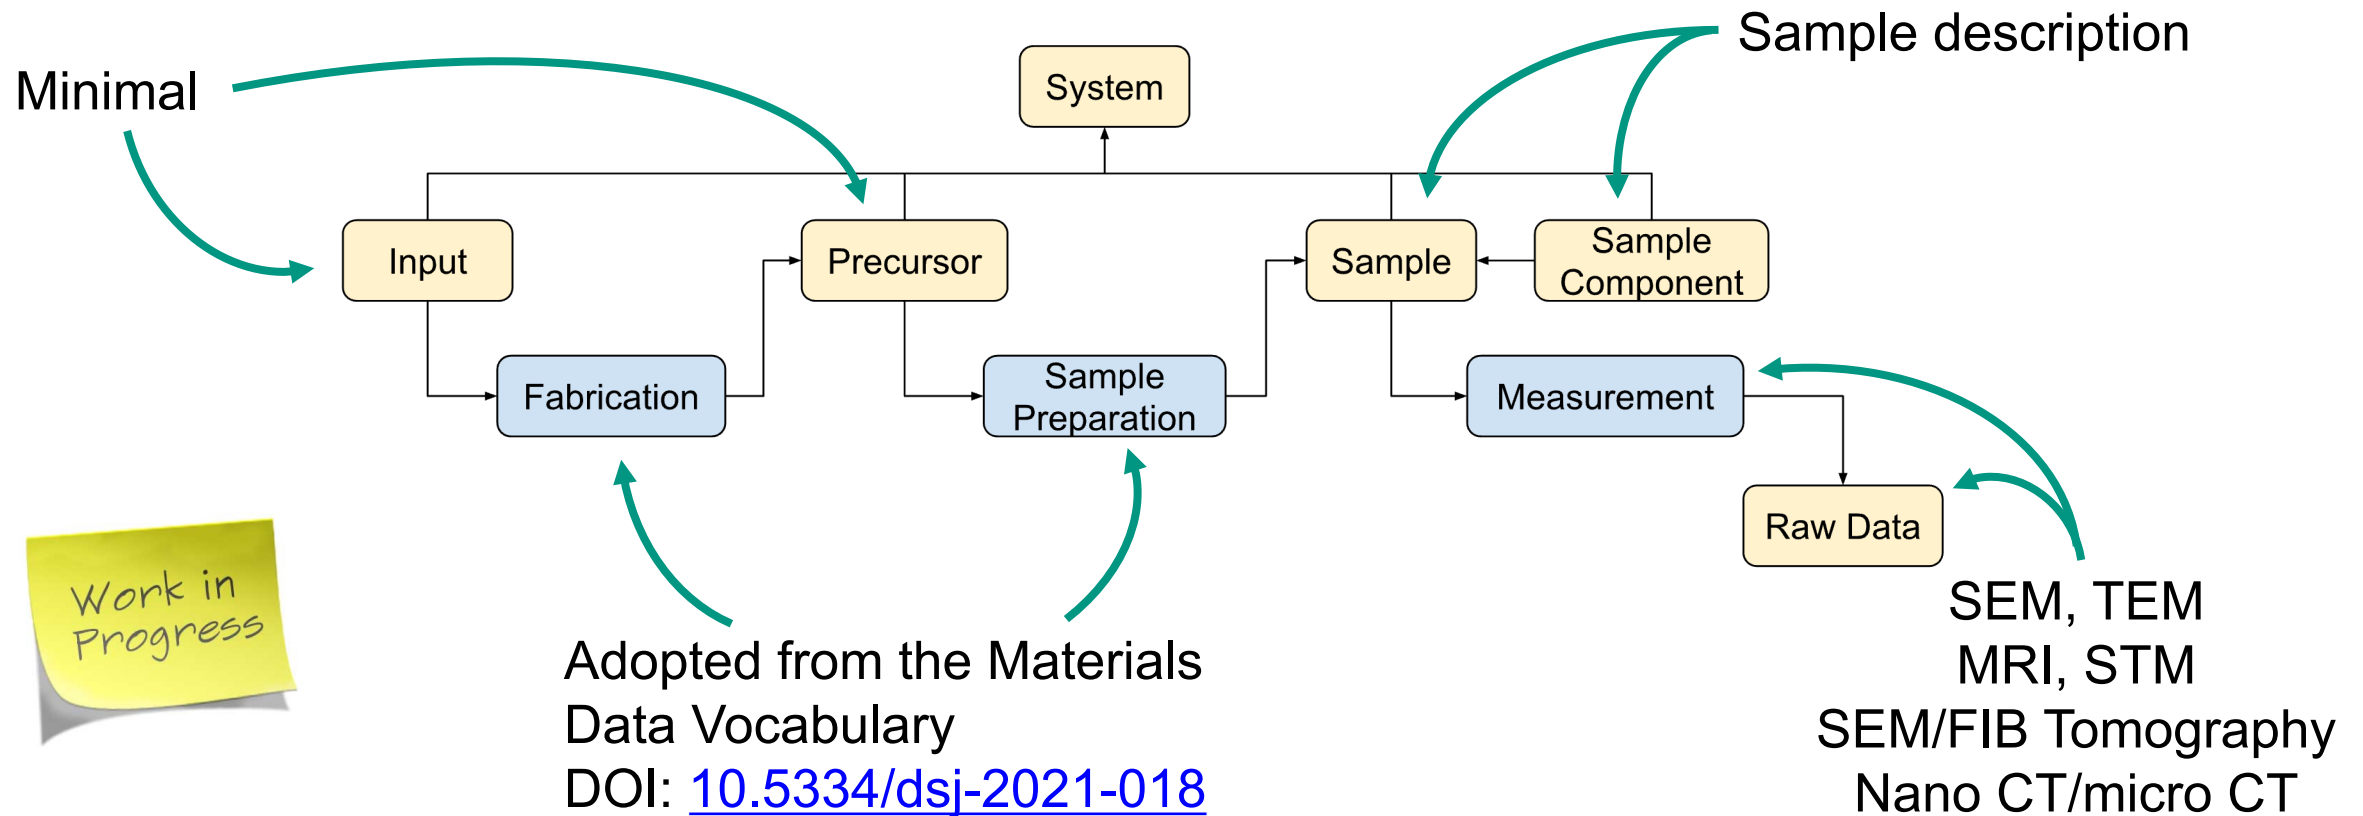

- Developed at KIT
- SKOS model
- Persistent identifier to each term
- Seamless integration of terms
- Centrally maintained
- Public read-only Skosmos instance

The screenshot displays the EVOKS interface. A yellow sticky note with the text "Work in Progress" is placed over the "User Role" concept page. The concept page shows the preferred term "User Role" and a list of narrower concepts: "Data Curator", "Instrument Scientist", "Team Leader", and "Team Member". A URL is provided for the concept, and options for downloading the concept in RDF/XML, Turtle, and JSON-LD are shown. To the right, a "Research User" form is visible, with the "User Name" field containing "Rossella Aversa" and the "User Role" dropdown menu open, showing the same list of roles as the concept page, with "Team Member" highlighted in pink.

Next steps: glossary extension

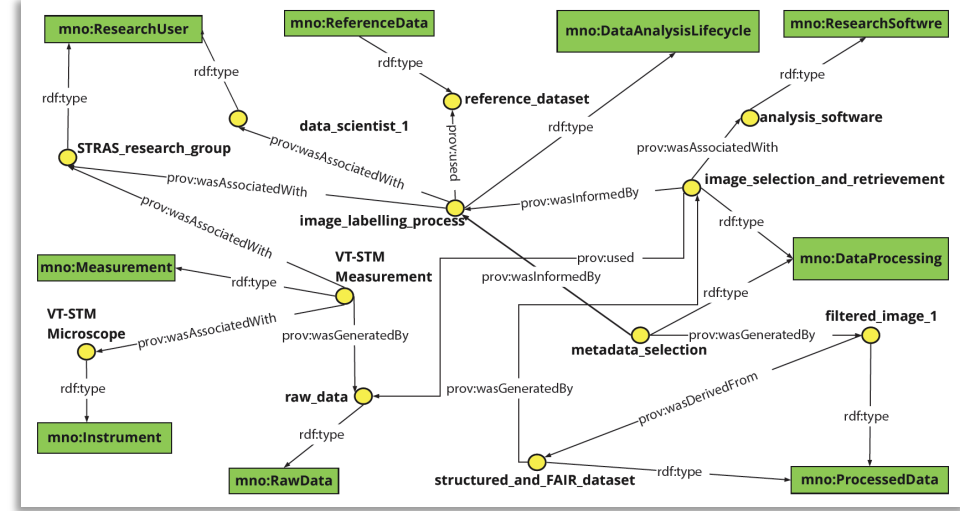

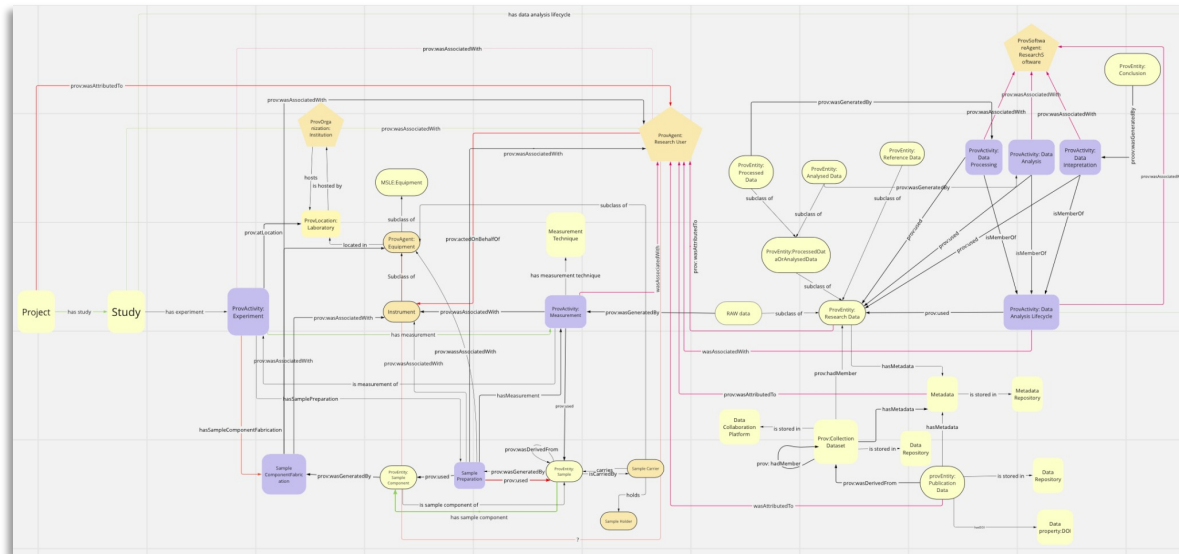

- Describe each of the processes and entities in the common workflow

Next steps: from glossary to ontology

- Formalize relationships: add context to the knowledge representation
- Logical constructs (classes, properties, axioms): structured and machine-readable

PRIMA (PRovenance Information for MAterials science) Ontology

<https://jl-mdmc-helmholtz.de/ontology/>

Conclusions

- Smooth collaborative process
- Guided by community requirements
- Driven by communication with scientists for collecting information
- Common description, tracking data provenance
- Aligned, whenever possible, with existing terminology
- Can be adopted by other materials science facilities and projects, e.g., NFDI-MatWerk, NFDI4Ing, Helmholtz Metadata Collaboration (HMC)
- High-level frame for future in-depth descriptions
- Can be extended by integrating existing fine-grained ontologies
- Training is planned for bringing the vocabulary in use
