# Section Overview

# Section Goals

# FAIR DO-Design

## Example: Big Mac Index

### How it works

Purchasing-power parity implies that exchange rates are determined by the value of goods that currencies can buy

Differences in local prices – in our case, for Big Macs – can suggest what the exchange rate should be

### Raw index /GDP-adjusted

Using burgeronomics, we can estimate how much one currency is under- or over-valued relative to another

# FAIR DO-Design

## Example: Big Mac Index

### Data

# FAIR DO-Design

## Solution 1 - The easy one

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
MetadataLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>

# FAIR DO-Design

## Solution 1 - The easy one

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
MetadataLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>

- Easily applicable
- Potential increase of findability
- Generic profile and data types

- Very limited overall machine-actionability
- Hard to reuse due to lack of machine-readable metadata
- Human evaluation required

# FAIR DO-Design

## Solution 2 - Frictionless Data-based

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	FrictionlessDataPackage
DigitalObjectLocation	<a href="https://repo/fric_data_pkg.zip">https://repo/fric_data_pkg.zip</a>

<https://specs.frictionlessdata.io/>

# FAIR DO-Design

## Solution 2 - Frictionless Data-based

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	FrictionlessDataPackage
DigitalObjectLocation	<a href="https://repo/fric_data_pkg.zip">https://repo/fric_data_pkg.zip</a>

<https://specs.frictionlessdata.io/>

- Easily applicable
- Potential increase of findability and reuse
- Generic profile and data types
- Machine-readable data and metadata

- Republishing required
- Limited machine-actionability on FAIR DO-level
- Full download required
- Format knowledge required

# FAIR DO-Design

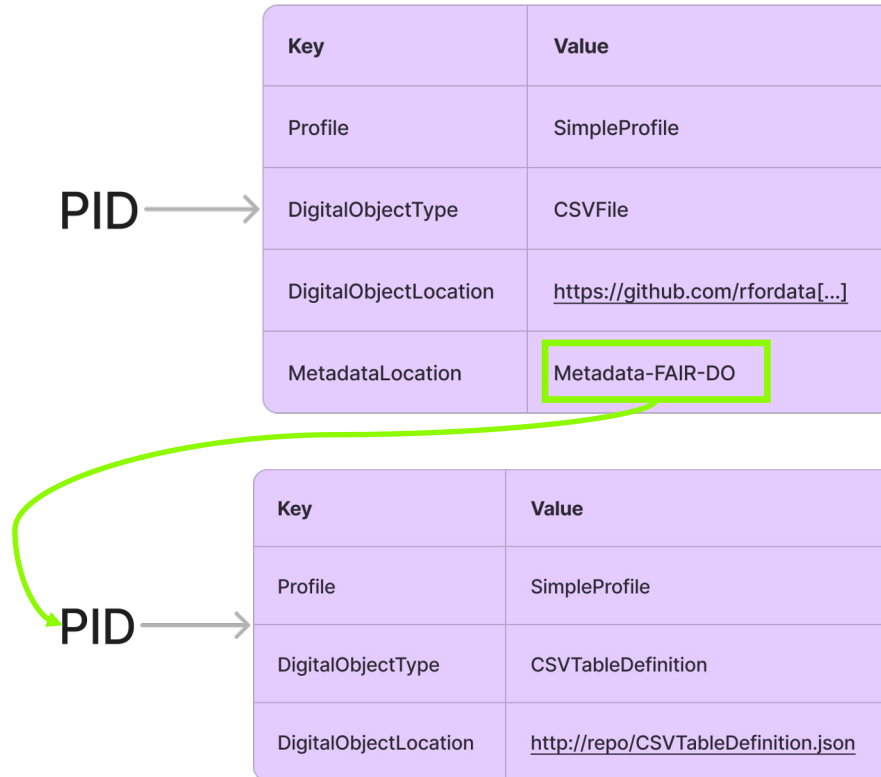

## Solution 3 - FAIR DO times two

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
MetadataLocation	Metadata-FAIR-DO

# FAIR DO-Design

## Solution 3 - FAIR DO times two

# FAIR DO-Design

## Solution 3 - FAIR DO times two

PID →

Key	Value
Profile	SimpleProfile
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
MetadataLocation	Metadata-FAIR-DO

- Enrichment of existing (legacy) data
- Potential increase of findability and reuse
- Generic profile and data types
- Machine-actionable via linked metadata
- Republishing of metadata required
- Requires metadata download and format knowledge
- Increased complexity

Key	Value
Profile	SimpleProfile
DigitalObjectType	CSVTableDefinition
DigitalObjectLocation	<a href="http://repo/CSVTableDefinition.json">http://repo/CSVTableDefinition.json</a>

# FAIR DO-Design

## Solution 4 - All-in-one

PID →

Key	Value
Profile	Profile4MachineActionableCSV
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
CSVTableDef	JSON-Object

# FAIR DO-Design

## Solution 4 - All-in-one

PID →

Key	Value
Profile	Profile4MachineActionableCSV
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
CSVTableDef	JSON-Object

- Easily applicable
- Potential increase of findability and reuse
- Specific but reusable profile and data types
- Machine-actionability on PID-level

- Huge entry barrier as profile and complex data type are required
- Unfolds full potential only if broadly applied

# The FAIR DO Cookbook and DataTypes

PID →

Key	Value
Profile	Profile4MachineActionableCSV
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
CSVTableDef	JSON-Object

## Ingredients

- Data Type Registry (DTR), e.g. <http://dtr-test.pidconsortium.eu/>
- Registered user account at Data Type Registry
- Web Browser

# The FAIR DO Cookbook and DataTypes

PID →

Key	Value
Profile	Profile4MachineActionableCSV
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
CSVTableDef	JSON-Object

## Ingredients

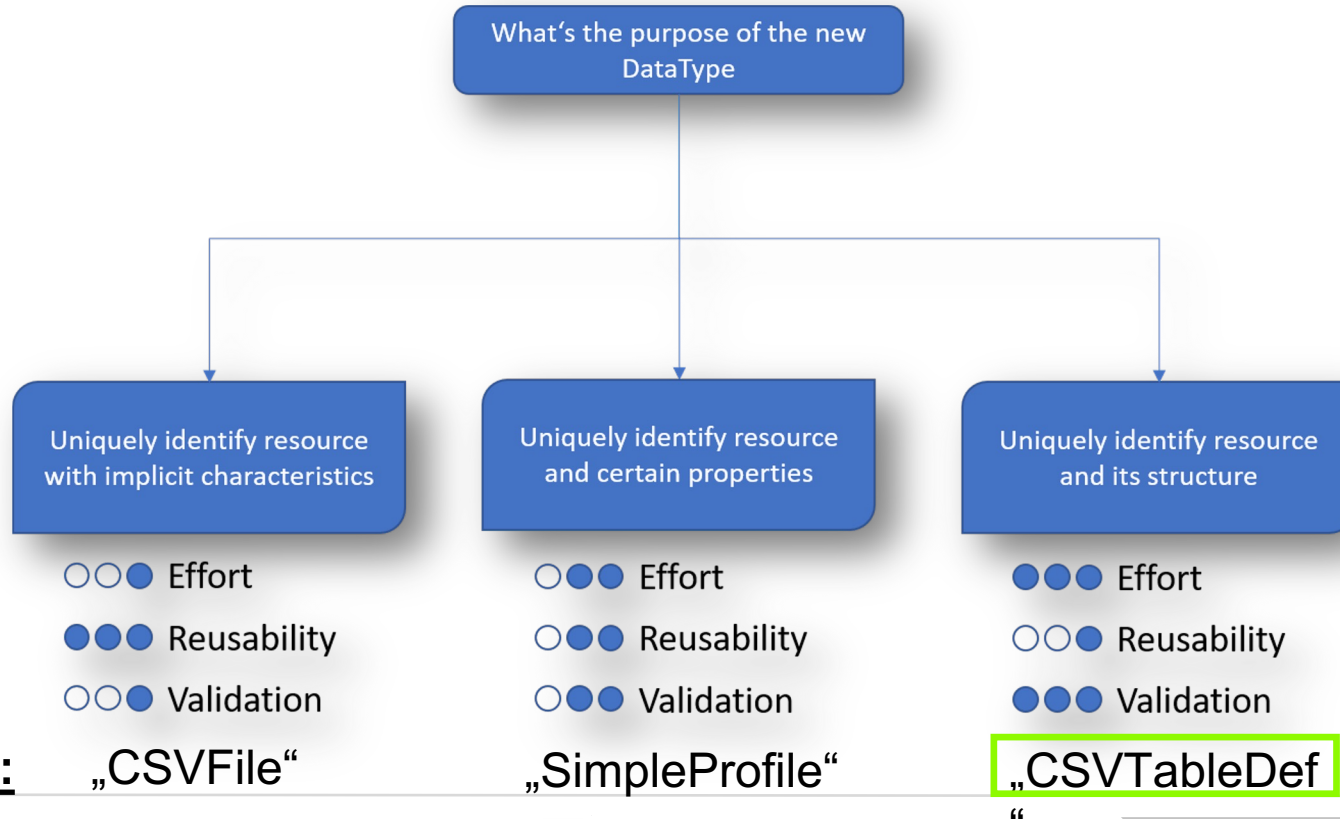

- Data Type Registry (DTR), e.g. <http://dtr-test.pidconsortium.eu/>
- Registered user account at Data Type Registry
- Web Browser

## Work Steps

1. Search data type registry for suitable data type
2. Describe/model envisioned data type (offline)
  - 2.1. Decide on Data Type's level of detail
  - 2.2. DTR Inquiry
3. Register data type(s) in data type registry
  - 3.1. Register new Child-Data Type(s)
  - 3.2. Register extended Child-Data Type(s)
  - 3.3. Register main Data Type

# Decide on a DataType's Level of Detail

Profile	Profile4MachineActionableCSV
DigitalObjectType	CSVFile
DigitalObjectLocation	<a href="https://github.com/rfordata[...]">https://github.com/rfordata[...]</a>
CSVTableDef	JSON-Object

## Ingredients

- Data Type Registry (DTR), e.g. <http://dtr-test.pidconsortium.eu/>
- Registered user account at Data Type Registry
- Web Browser

## Work Steps

1. Search data type registry for suitable KIP
2. Describe/model envisioned KIP
  - 2.1. Call to mind basic KIP principles
  - 2.2. Decide on KIP contents
3. Register new KIP in Data Type Registry

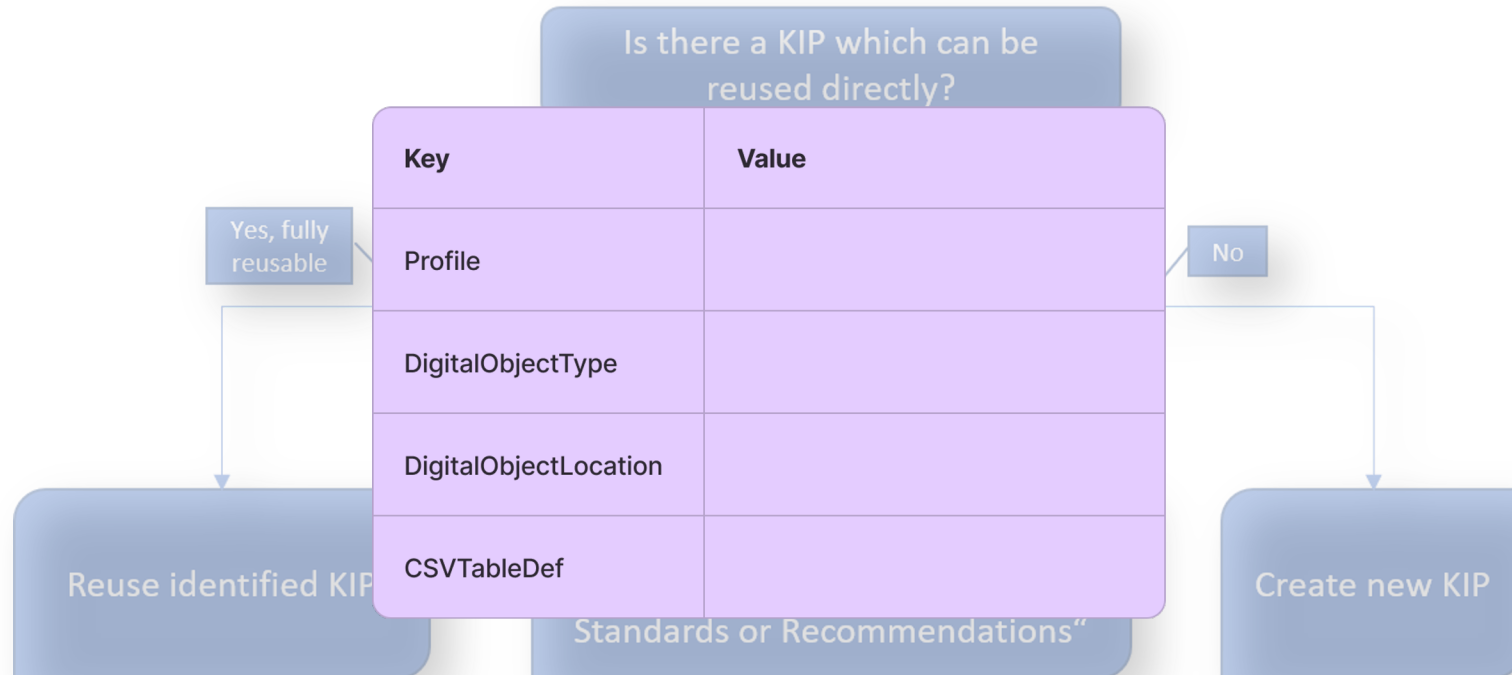

KIP = Kernel Information Profile

# Decide on a Profile

# Decide on a Profile

# Register Profile

1. Identify and create all missing DataTypes, just like before.
2. Copy existing/create new profile.
3. In case of copy, refer to original profile.
4. Name it.
5. Add all attributes and their type information (must be unique!).
6. Save it and become a gardener.

# Section Summary

Learn about good and „not so good“ DataTypes and Profiles.

- *There is no clear „good“, „bad“, or „ugly“.*
- *Effort strongly depends on what you want to achieve.*
- **Will improve with a growing number of DataTypes and Profiles.**

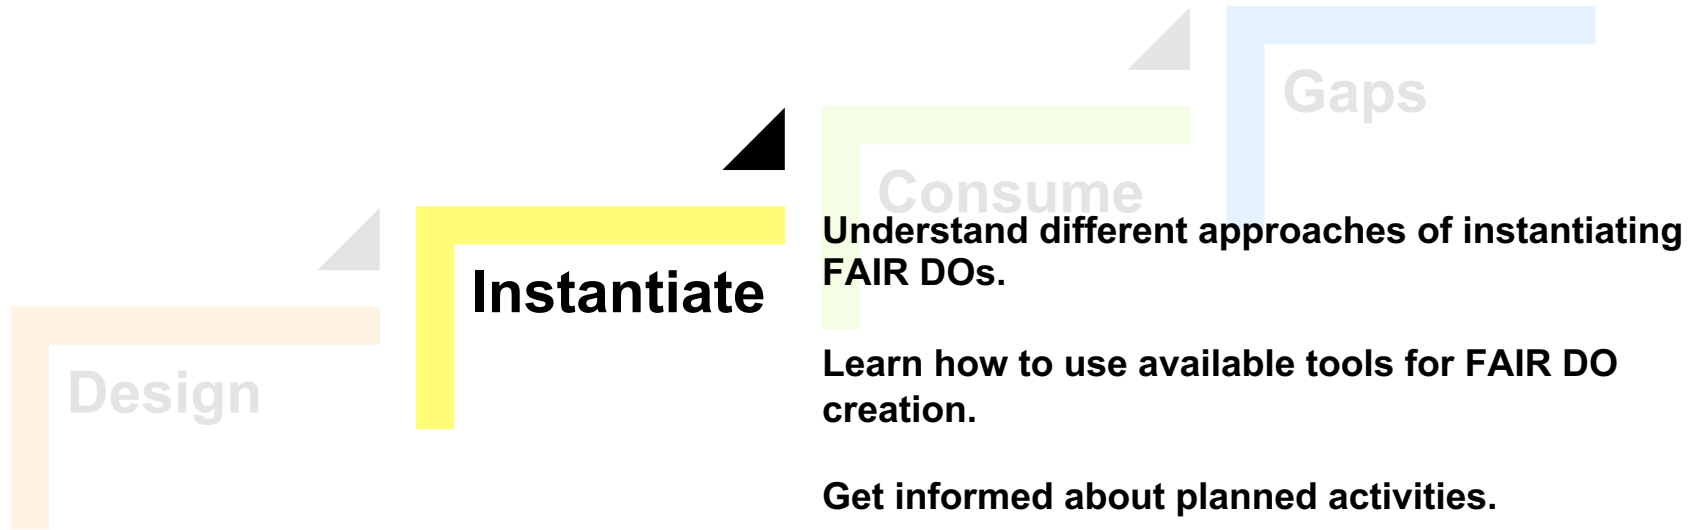

Learn how to use the FAIR DO Cookbook for DataType and Profile design.

- *Comprehensive collection of good practices with clear focus on single implementation can lower entry barriers.*
- **More of such guidelines required?**

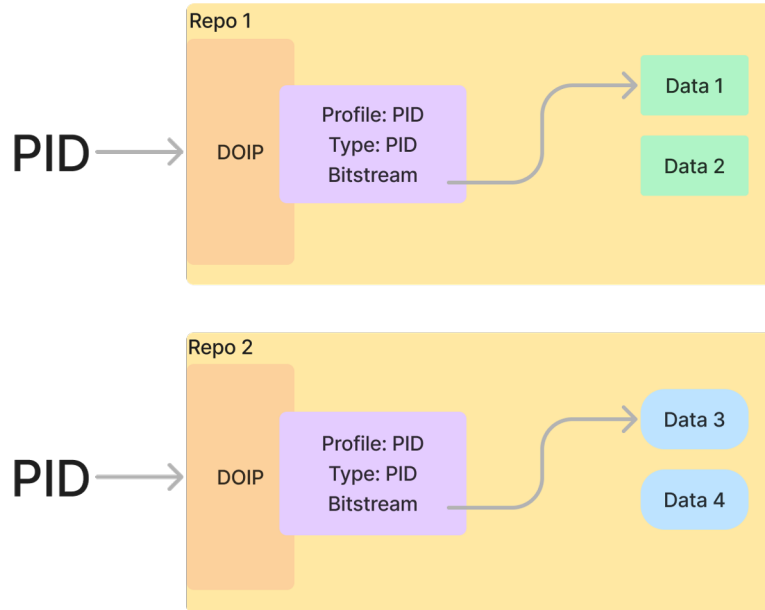

Gain awareness of which gaps currently exist and planned activities.

- *It can be a long way from the idea to a new FAIR DO.*
- *DataType Registry requires a major overhaul.*
- **FAIRCORE4EOSC and alternative implementation at KIT.**

# Section Goals

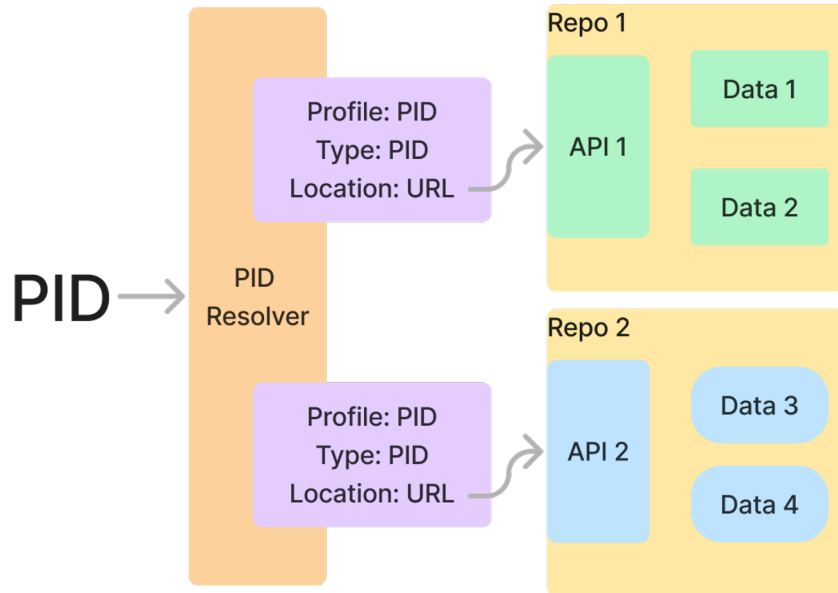

# Two Sides of a Similar Medal

DOIP = Digital Object Interface Protocol

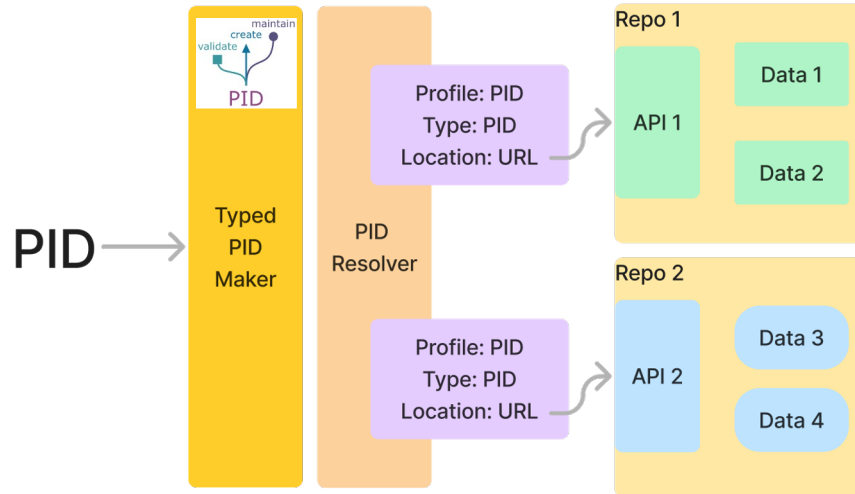

- + Native FAIR DOs with authoritative contents
- + Supports vision of one-for-all interface
- + Built-in support for extended operations
- Requires infrastructure providers to implement DOIP or operate proxy
- Pure DOIP is TCP/IP-based, i.e., very low-level
- Seems to be poorly adopted

# Two Sides of a Similar Medal

- + Non-invasive application of FAIR DOs on top of existing infrastructures
- + Accessible via PID resolver
- + May accumulate metadata from different sources
- ~ Location preferably (open) Web-resolvable, HTTP-based API endpoint
- PID record non-authoritative source, regular validation required
- No safety net while creating FAIR DOs
- Plain HTTP calls required

# The Typed PID Maker

- + Supports use of different PID resolvers
- + Includes validation of PID records
- + Supports caching of DataTypes and Profiles
- + Allows PID customization
- + Allows fine-grained authorization
- + Supports indexing and search
- Another wrapper
- Standalone service that requires to be operated
- Still, plain HTTP calls required

# The Typed PID Maker – Create a FAIR DO

```
curl --location --request POST 'http://typed-pid-maker-instance/api/v1/pit/pid/' \  
--header 'Content-Type: application/json' \  
--data-raw '{
```

# FAIR DO Builder

## Features

- Easy-to-use Web UI
- Form-based FAIR DO creation including basic validation
- Visual linking of FAIR DOs

## Target Audience

- Developers
- FAIR DO creators and designers

## Status

- Early access (single profile)

<https://t1p.de/fdo-builder>

## FAIR DO Builder

### Features

- Easy-to
- Form-
- basic v
- Visual

### Target A

- Devel
- FAIR

### Status

- Early access (single profile)

### Future Plans

- Integrate multi-Profile support
- Integrate dynamic DataType support
- Improve user experience, e.g., detailed error messages
- Support bulk-creation of FAIR DOs

[du/fdo-builder-ui.html](#)

# iDORIS

Integrated Data Type and Operations Registry with Inheritance System

## Features

- Registry for DataTypes, Profiles, and Operations
- Inheritance support for DataTypes and Profiles
- Support for DataType-Operation matching

## Target Audience

- Developers
- Infrastructure providers

## Status

- Conceptual phase (tdb. Q4 2024)

# Section Summary

## Understand different approaches of instantiating FAIR DOs.

- *Learned about FAIR DOs via DOIP and PID resolver.*
- *Typed PID Maker for additional functionality.*
- *(Many) other approaches exists, harmonization and mapping required.*
- **For production use automation/integration required.**

## Learn how to use available tools for FAIR DO creation.

- *Low-level APIs available for automation/integration, in-depth knowledge required.*
- *Introduced FAIR DO Builder as easy-to-use UI for humans.*
- **Further tooling and flexibility required.**

## Get informed about planned activities.

- *Improvements and extensions for existing tooling.*
- *iDORIS to improve DataType/Profile creation and adding Operation support.*
- **Ideas and contributions are always welcome!**

# Section Goals

Learn how to possibly consume FAIR DOs depending on the target audience.

Future plans and collection of ideas.

Design

Instantiate

Consume

Gaps

# FAIR DO Search

## Features

- Easy-to-use Web UI
- Runs on top of Typed PID Maker
- Enhanced search via Elasticsearch
- Facet support for FAIR DO filtering

## Target Audience

- Scientific users

## Status

- Early access (single profile, static facets)

<https://t1p.de/fdo-search>

## FAIR DO Search

### Features

- Easy-to
- Runs o
- Enhanc
- Facet

### Target A

- Scien

### Status

- Early

### Future Plans

- Customization of facets and result view
- Integration of multi-Profile support
- Allow better reusability

/elastic-search-fdo.html

# FAIR-DOscope

## Features

- Visualization of and navigation via PID records
- Data Type-driven rendering of key/values
- Visualization of FAIR DO relationships

## Target Audience

- Developers
- FAIR DO creators and designers

## Status

- Released (v1.1.0)

<https://t1p.de/fdoscope>

## Features

- Visuali
- DataT
- Visual

## Target A

- Develo
- FAIR

## Status

- Releas

## Future Plans

- Dynamic resolution of DataTypes/Profiles
- Improved graph visualization
- Improved integration with other tools

elastic-search-fdo.html

# PID-Component

## Features

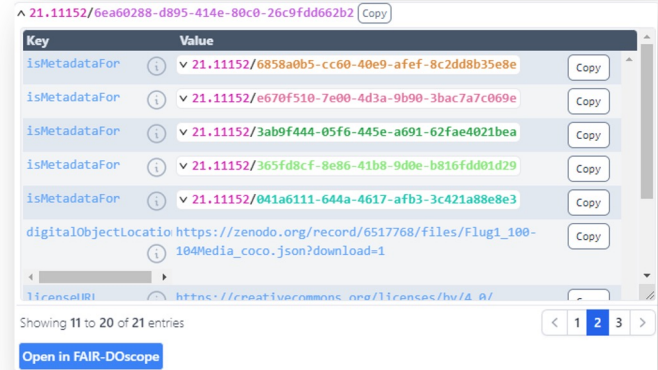

- Web component to render FAIR DOs
- Seamless integration into any Web page
- Extensible rendering, e.g. ORCiDs

## Target Audience

- Platform developers (integration)
- Scientific users

## Status

- Released (vo.o.II)

# Section Summary

Learn how to possibly consume FAIR DOs depending on the target audience.

- *FAIR DO Search allows search in huge FAIR DO collections.*
- *FAIR-DOscope enables fast inspection of created FAIR DOs.*
- *PID-Component for seamless integration into existing Web UIs.*
- **Move towards reusability and integrability.**

Future plans and collection of ideas.

- *Focus mainly on flexibility and customization.*
- **Ideas and contributions are always welcome!**

# Section Goals

Identification of other missing tools/components.

Clarification of open questions.

Summary and closing of session.

Gaps

Design

Instantiate

Consume

# Ideas for Missing Tools/Components

## Design

- DataType Designer UI

## Instantiate

- Metadata2Record Mapper

## Consume

- FAIR DO Finder

## Others

- Maintenance tools

# Summary

Got to know the 🍔-index.

Got 4 ideas on how to represent  
CSV data as FAIR DO.

Completed 2 Mentimeter.

Learned about 7 tools.
