Zu diesen Themen gehören zum Beispiel Kausalität und Determinismus, Messungen und Naturgesetze, sowie Reduktion und Emergenz. Obwohl schon lange unter Physikern wie Philosophen diskutiert, bieten neue Entwicklungen bei Experimenten zur Quantenmechanik sowie der Physik der Kondensierten Materie regelmäßig Anlässe diese Themen wieder aufzugreifen. Gegen Ende des Seminars beschäftigen wir uns dann mit spezielleren Fragestellungen; zum Beispiel untersuchen wir die Rolle von experimentellen Invarianten für die theoretische Beschreibung von empirischen Beobachtungen. Ziel des Seminars ist—im Wechselspiel zwischen Physik und Philosophie—die allgemeinen Einsichten der Wissenschaftstheorie anhand konkreter Beispiele zu diskutieren und dabei ein tieferes Verständnis der Physik zu entwickeln.  <b>Voraussetzungen:</b>                      Naturwissenschaftler wie Philosophen sind gleichermaßen willkommen. The course will be taught simultaneously at both Universities. Live lectures either take place at UoC or at KIT and are streamed via Zoom to the respective other university. <b>Keep in mind the time difference between Greece and Germany - Greece is one hour ahead!</b> Because winter semesters between Greece and Germany deviate substantially, the course is condensed into <b>8 lectures of three hours each</b> to fit the respective semester overlap. <b>KIT Students:</b> Please register properly for the course via the KIT campus system and also send an Email to <a href="mailto:Alexandros.Stamatakis@h-its.org">Alexandros.Stamatakis@h-its.org</a> to be added to the course mailing list. 2500081 English	<b>Probabilistic Time Series Forecasting Challenge</b>  Blended (On-Site/Online) <b>Organizational topics</b> <b>Short description</b> In this data science project, students make and evaluate statistical forecasts in a realistic setup (involving real-time predictions and real-world time series data). A kickoff meeting will take place in person in mid October. During the semester, there will be a weekly online meeting in which students and instructors discuss the current state of the forecasting challenge. <b>Prerequisites</b> Students should have a good working knowledge of statistics and data science, including proficiency in a programming language like R, Python, or Matlab. Knowledge of time series analysis is helpful but not strictly required. Motivation and curiosity are particularly important in this course format that requires regular, active participation over the whole semester. Please note that the number of participants is limited due to the interactive course format. Application takes place via the Wiwi portal, where further information is available. <b>Examination rules</b> The course counts for 4.5 credit points (Leistungspunkte). Examination is via an alternative exam assessment (§4(2), 3 SPO). Necessary conditions to pass the course: 1) Weekly submission of statistical forecasts during the semester, excluding the Christmas break, 2) A presentation (approx. 20 minutes) during the semester, 3) Submission of a final report (5-10 pages) around the end of the semester. The presentation and the final report should describe the forecasting methods and their statistical evaluation. Grading is based on the presentation (30%) and the final report (70%).	<b>Project (PRO)</b> Krüger, Fabian Bracher, Johannes Koster, Nils Lerch, Sebastian
