The revised version of the Karlsruhe nuclear data library KEDAK-3 was released in July 1979. In this report the status of KEDAK-3 is documented. This report supersedes the previous report /1/ on this subject.

In Table 1 changes made in KEDAK with respect to the previous version of KEDAK /2, 3/ are indicated. Beside these changes for all materials on KEDAK atomic weights and abundancy values have been revised. These data have been taken from Wapstra and Gove /4/ and de Bièvre /5/. In the energy region where the neutron elastic scattering is isotropic in the center of the mass system the value of $\bar{\mu}_\ell$ are corrected for all the isotopes. For fissile and fertile materials the consistency between resonance parameters and point cross sections stored on KEDAK have been generated /6/.

Table 2 gives a list of contents of KEDAK-3 and the nomenclature of the data type on KEDAK is given in Table 3. The relationship among the redundant data on KEDAK is as follows:

absorption cross section (SGA)

$$\sigma_{ab} = \sigma(n,\gamma) + \sigma(n,f) + \sigma(n,p) + \sigma(n,d) + \sigma(n,\alpha)$$

non-elastic cross section (SGX)

$$\sigma_{non} = \sigma_{ab} + \sigma(n,n') + \sigma(n,2n) + \sigma(n,3n)$$

$$= \sigma_t - \sigma(n,n)$$

transport cross section (SGTR)

$$\sigma_{tr} = \sigma_t - \sigma(n,n) \cdot \bar{\mu}_\ell$$

It should be noted that the KEDAK-definition of the absorption cross section differs from that of CINDA. In KEDAK σ_{ab} contains all those processes in which no neutron appears in the exit channel. The only exception is σ_f which is included in σ_{ab} .

For the users of KEDAK reference is made to the KEDAK management and processing codes /7-12/ and related publication /13/.
