

# Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel

Institute of Machine Design and Automotive Engineering  
University of Karlsruhe, Germany

o. Prof. Dr.-Ing. Dr. h.c. Albert Albers

Dipl.-Ing. Marc Albrecht

Dipl.-Ing. Arne Krüger

Dr.-Ing. Ralph Lux

M. Albrecht

# **Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel**

- **Introduction and Methodology**
- **The Universal Power Train Test-Bench**
- **The Dual Mass Flywheel - Function and Design**
- **The Dual Mass Flywheel on the Test-Bench**
- **Simulation Model of the Dual Mass Flywheel**
- **Validation**
- **Summary and Conclusions**

# Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel

- **Introduction and Methodology**
- The Universal Power Train Test-Bench
- The Dual Mass Flywheel - Function and Design
- The Dual Mass Flywheel on the Test-Bench
- Simulation Model of the Dual Mass Flywheel
- Validation
- Summary and Conclusions

M. Albrecht

# Experiment

## Drive Test

Customer requirements, comfort, life

## Roller Test Stand (scheduled)

## Power Train Test-Bench

Complete power trains, components

## Sub-system

Transmissions, rolling- and sliding bearings

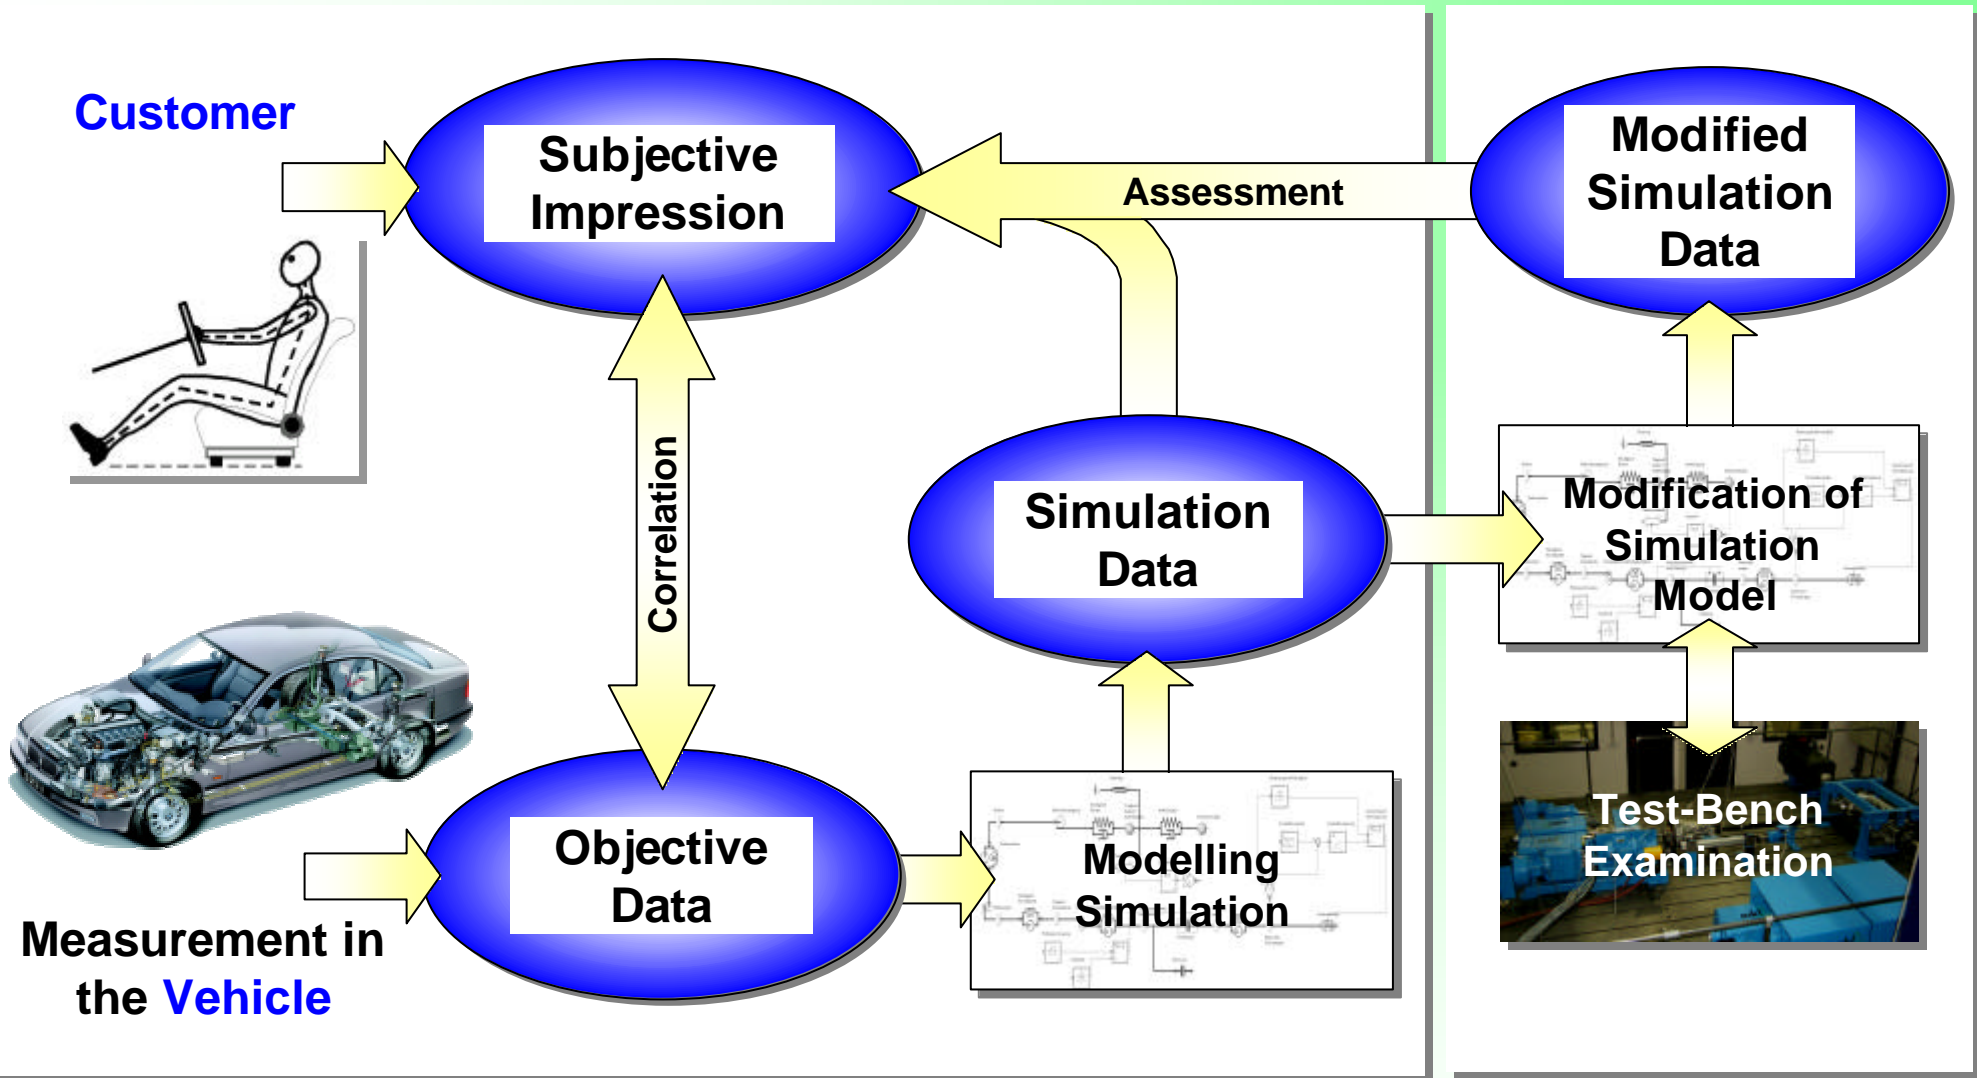

## Element

Frictional function systems, EHD-systems

# Simulation

M. Albrecht

# Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel

- Introduction and Methodology
- **The Universal Power Train Test-Bench**
- The Dual Mass Flywheel - Function and Design
- The Dual Mass Flywheel on the Test-Bench
- Simulation Model of the Dual Mass Flywheel
- Validation
- Summary and Conclusions

M. Albrecht

- Excitation frequencies up to 250 Hz
- Torque of driving unit in continuous operation up to 260 Nm
- Speed of driving unit up to 6900 rpm
- Simulation of vehicle mass done electrically by retardants
- Torque of driven machines up to 1500 Nm

M. Albrecht

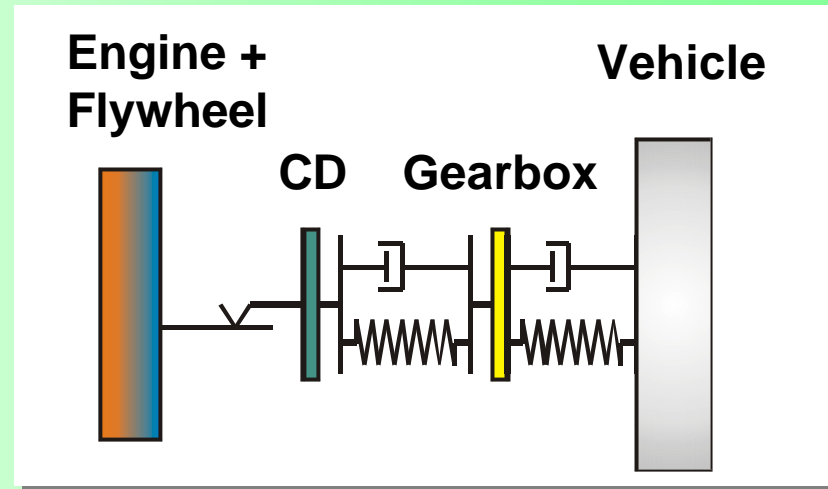

# Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel

- Introduction and Methodology
- The Universal Power Train Test-Bench
- **The Dual Mass Flywheel - Function and Design**
- The Dual Mass Flywheel on the Test-Bench
- Simulation Model of the Dual Mass Flywheel
- Validation
- Summary and Conclusions

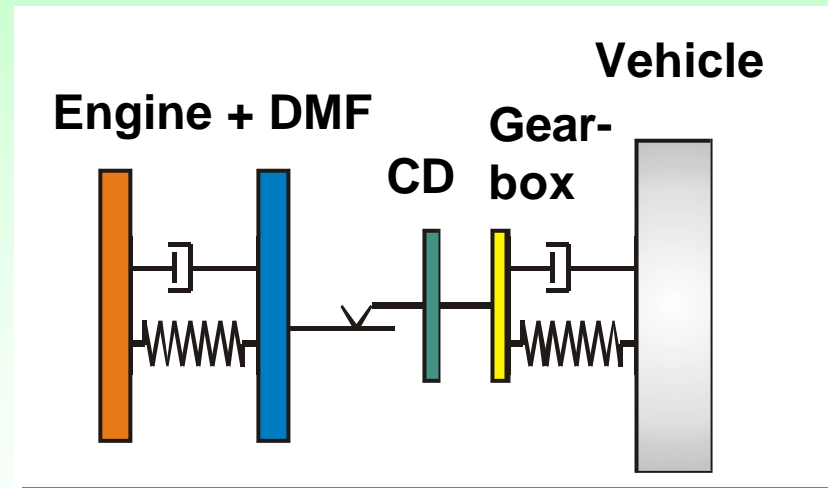

M. Albrecht

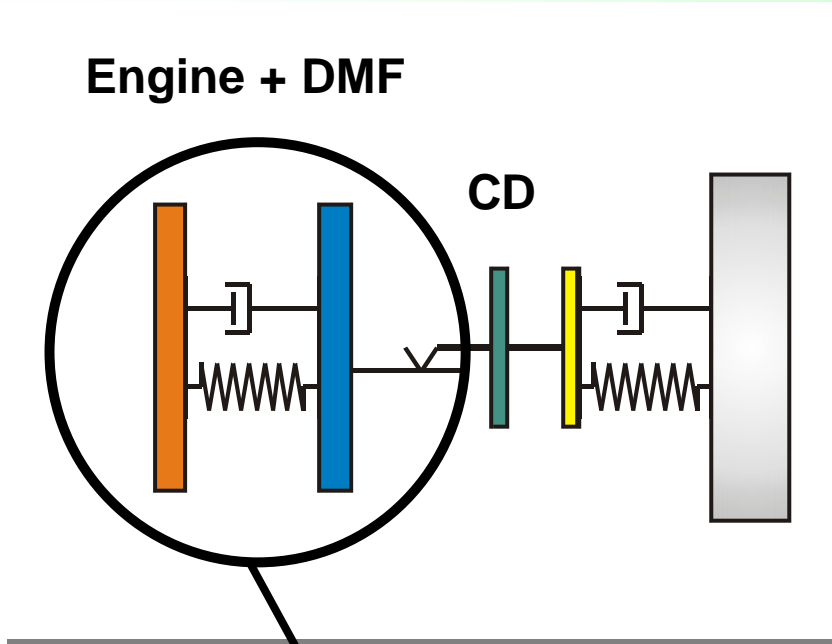

## Powertrain with Conventional Clutch

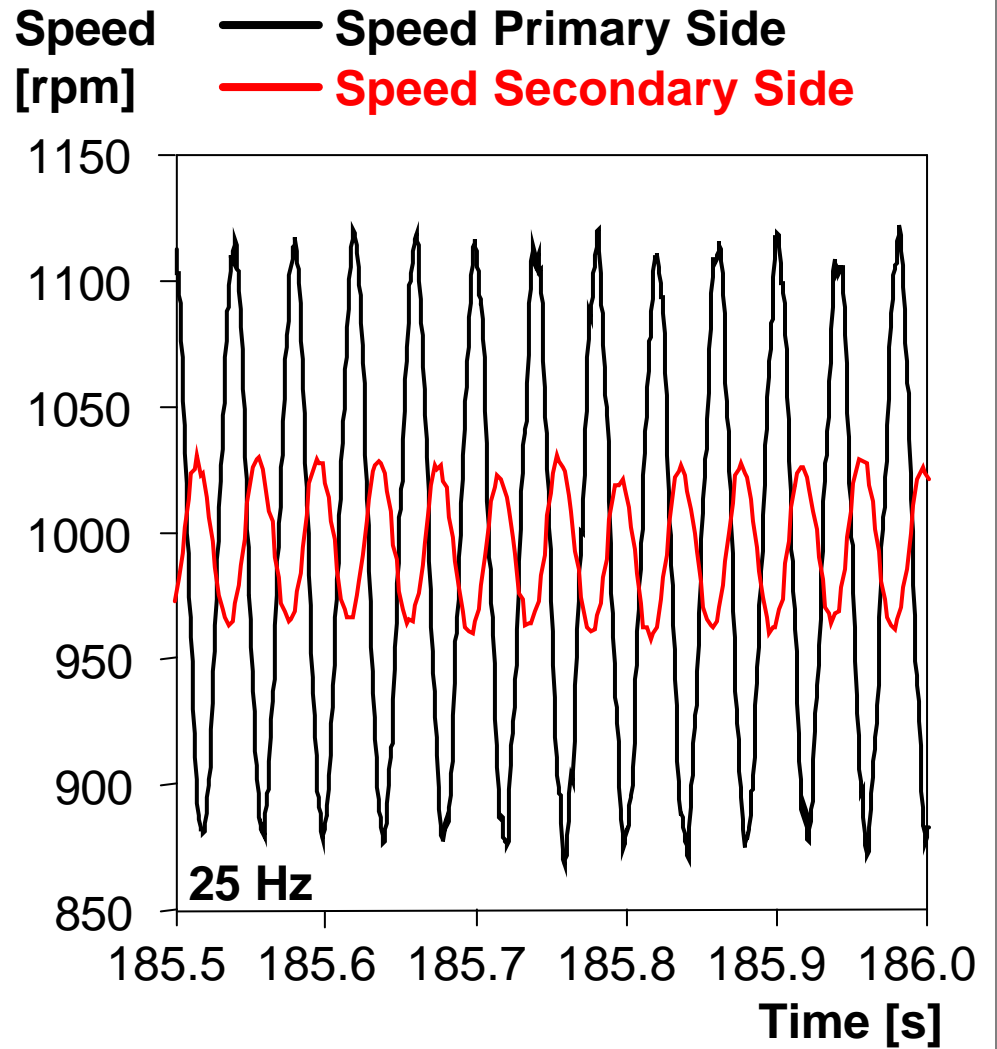

## Powertrain with Dual Mass Flywheel

M. Albrecht

“Mechanical low-pass filter“

M. Albrecht

M. Albrecht

Forces between arc spring and support channel depend on angle of distortion and rotary speed.

# Integration of Simulation and Testing in Power Train Engineering Based on the Example of the Dual Mass Flywheel

- Introduction and Methodology
- The Universal Power Train Test-Bench
- The Dual Mass Flywheel - Function and Design
- The Dual Mass Flywheel on the Test-Bench
- Simulation Model of the Dual Mass Flywheel
- Validation
- **Summary and Conclusions**

M. Albrecht

**• Integral development environment for power trains**

**• Integral action shown exemplarily with the DMF**

**• Practicality proven by corresponding results of**

- measurement on the car,**
- measurement on the test-bench,**
- numerical simulation**

**= Increase of system comprehension**

**= Improved design of power train components and entire power trains**

M. Albrecht
